NEWS IN BRIEF**Double power
Univac mini**

A NEW model in the Univac V77 line of minicomputers is on the way. Called the V77/800, it will offer about twice the power of the present top-of-the-line V77/600. At the time that Univac opened negotiations to acquire Varian Data Machines, turnover was running at about \$40 million per annum; it has now doubled to \$80 million.

ACM award

THIS year's ACM Grace Hopper Award of \$1,000 has been won by Raymond Kurzweil, president of the firm in Cambridge, Massachusetts, that developed a machine for reading books aloud to the blind (CW, March 30). The Hopper Award is presented by the Association for Computing Machinery to the person under 30 considered to have made the year's most significant contribution to the industry. The Kurzweil machine is a powerful OCR system coupled to a voice synthesiser.

Dialog meeting

A USERS' meeting for customers of the Lockheed Dialog online retrieval service is to be held at the Tara Hotel, London, on December 4. Roger Summit, manager of the service and whose brain-child it is, will be present.

Share swap offer

THE proposed acquisition of Microdata by Addressograph-Multigraph, announced last week (CW, November 18) looks likely to go ahead. Addressograph-Multigraph is offering a share swap which values the California minis at about \$47 million.

Belle of the Brighton (online) bar . . .

AN interactive accounting system based on NCR hotel equipment is being used by the Gaiety Club Hotel in Hove, Surrey, to handle its front desk and restaurant sales transactions.

The main accounting functions are controlled by an NCR 8260 desk-office computer, but an NCR 280/800 has been installed at the front desk to enable hotel receptionists to check in guests and assign charge accounts. Current room rates and guest

balance are held in the 9000's memory.

For the Pavilion Restaurant and Brighton Belle Bar at the hotel, transactions are handled by two NCR 280/800s. Guests can charge their drinks to their room bill via the 9000s, or they are billed online to the front desk terminal.

Our photograph shows one of the Brighton Belle Bar lodges operating the NCR 280/800.

Million billion bit memory for IBM future systems

A PATENT for a million billion bit memory system awarded recently to IBM's San Jose research laboratory gives the company the chance to produce one of the most powerful supercomputers of the future. If it ever reaches production, it will certainly be one of the coldest systems ever made.

The patent, entitled "Frequency selective optical data storage system," is for a supercooled, laser-based photochemical memory. It is the prospect of coupling such a memory system to other hardware, based on the superconducting Josephson junctions which IBM has developed, that leads to the possibility of a future supercooled computer of enormous power.

Though the company points out that considerable research still needs to be carried out to produce a working memory system, the patent specifically mentions one possible implementation.

This would be a memory capable of storing one million billion bits (10¹⁵) in a physical area of about one square metre.

Based on a photochemical process called "hole burning," the invention depends on the use of another IBM invention, the frequency-tunable dye laser. The laser is directed onto a sample of a photo-reactive

material that is cooled to about -270°C, a few degrees above absolute zero.

This produces a chemical change in the material that is directly related to the light

frequency selected for the laser. The frequency-selected molecules are changed into a new compound, and on further light at that frequency will cause any change.

2960 written off after blaze

A BRAND new dual ICL 2960 installed by the Swiss Bank in the City of London could be completely written off because of a fire in the air conditioning of the bank's computer suite. ICL says that there is evidence of chemical contamination, the effects of which are unknown.

The 2960s are now back with ICL and the Swiss Bank is continuing DP operations using its existing dual System 4/60 machines. According to ICL,

work had not been transferred to the 2080s, although the translation of online systems has been going on since early this year when the 2080s were ordered (CW, February 2).

The fire itself was confined to the air conditioning, but ICL says that smoke was drawn into the computer room along with chemicals from some of the burning material in the air conditioning system.

ICL is unable to give the pre-

Univac in bank terminals deal

AN agreement between Univac and Bunker-Ramo on banking terminals will be announced shortly. Univac has been seeking a terminal to replace its banking clients and enable close to an agreement with Datasach, which would also have involved Univac marketing Datasach terminals in some countries (CW, November 9).

Briefing VW-Nixdorf deal is off

TALKS between Volkswagen and Nixdorf about the motor giant taking a stake in West Germany's leading small systems manufacturer have been terminated. Nixdorf was not prepared to concede the 50% stake that Volkswagen wanted.

As Computer Weekly went to press, Nixdorf was preparing to announce the name of another possible partner.

E-Series now expected early January

THE forthcoming IBM E-Series replacement for low mid-range 370s is now set for announcement in the first or second week in January — and, unlike the new 8100 and System 38, will be offered for delivery shortly after announcement.

This is the view of Aaron Orliansky, a vice-president specialising in the computer industry at New York stock-brokers Oppenheimer & Co.

"The reason for the delay in announcing the E-Series is that it falls in the middle of IBM's

market range, where the company has been losing share for years, and IBM wants to make quite sure that its attack will be effective before making the announcement," he told Computer Weekly.

Orliansky believes that the 8100 distributed processing system and System 38 provide strong pointers to the nature of the E-Series, but the unbundling of software could well even further.

"I believe that they will try to charge for use of the software

wherever possible," he said. Usage pricing of software was pioneered by Control Data with a mathematics package, Apex III, at the beginning of the year (CW, January 5), and CDC has since told Computer Weekly that it is considering applying the policy to other software products.

Orliansky expects that much of the technology in the System 38 will also be found in the E-Series, and expects it to feature a similar approach to storage, with disc storage treated as a

logical extension of main memory. "IBM has already received twice as many orders for 8100s as it has production capacity to deliver in 1980," added Orliansky. "I do not expect this to happen with the E-Series. I think orders will be in line with IBM's capacity to produce." He added that there were already over 1,100 customers for 8100s in Europe.

ENGEL... chairman of the ANSI Committee that produced the Fortran 77 standard.

Marathon effort

"OUR ambition for the Fortran 77 standard was that more user programs could be written directly in Fortran and that Fortran programs would be more readily transportable between systems."

This was how Frank Engel, chairman of the ANSI committee that produced the Fortran 77 standard, summarised the marathon 12-year effort to upgrade the language.

A meeting was held in London this week under the auspices of the International Standards Organisation to discuss the new Fortran 82 standard and tomorrow (Friday) the BCS Fortran Specialist Group is holding a public Fortran forum meeting at Imperial College, London, to discuss the new standard.

Engel, who will attend the Fortran Forum, was in London to accept honorary membership of the British Computer Society at its annual dinner on November 20. He spoke beforehand to Software File Editor Peter Hewitt on some of the obstacles in the path of language standardisation. See page 7.

PO runs out of modems

BECAUSE of an unexpectedly heavy demand for 2,400 bps Datel services using the most up-to-date equipment, the Modem 12, intending users are now having to wait up to six months for a modem to be installed. To overcome the Modem 12 shortage, the Post Office has placed an additional £4.5 million order with the manufacturers, SE Labs, an EMI company, and a spokesman said it was hoped that delays would be cut by half by the spring.

Datel 2112, the Post Office's in-line service, formerly used versions of Modem 7, which was suitable only for the in-line service. Modem 12 is also used on the International Datel 2400 service and this has been one of the factors causing the long lead time.

An SE Labs spokesman said the company had been more than meeting its contractual obligations and that it had the ability to respond very quickly to meet the increased demand. He said that the extra orders represented a 20 per cent boost in output and it was likely that extra staff would have to be taken on. More orders for modems are expected shortly but so far no details have been released.

Datel customer TCS Bureau, of Beckenham, has had Modem 12s on order for two months and

expects to save time and money with them when they arrive, by using them in bulk batch transmissions, where it had found Modem 7C not all that easy to use over dial-up lines.

Another modem supplier, Cuse of Rieksunsworth, says it is being asked by users to supply modems for 2,400 bps operation but is unable to do so because it is not allowed to under the Post Office monopoly conditions.

In a further effort to improve its overall telecommunications services the Post Office is now evaluating the Time Encoded Speech voice digitising technique. This being developed by Bath University in co-operation with the Ministry of Defence (CW, July 27), and could be used to fit five or six times as many calls on to the same line as pulse

'Schools must catch up'

UNLESS extra resources are made available immediately to enable schools to catch up with the rest of society in the use of new technology, the education system will fail to meet the challenges posed by the "micro revolution", according to David Tinsley, a general inspector of schools in Birmingham.

He was speaking this week at a conference organised by Stockport Education Authority on the impact of microelectronics.

The company is said to be developing, for late next year, a silicon on sapphire version of the processor.

Opportunities

A REPORT on the opportunities for disabled people in industry is being prepared by the National Computing Centre. A draft copy of the report is currently being studied by the bodies that have contributed to it.

Rockwell joins 16-bit micro market

AN official announcement is expected next month of yet another contender in the 16-bit microprocessor marketplace. This one will be from Rockwell Microelectronics, with a part currently designated Super 65.

Based on a bus structure that is largely compatible with the MOS Technology 6502, 8-bit processor, which Rockwell manufactures as a second source, it will have an instruction set capable of running Pascal. Rockwell is developing a compiler for the language.

Compatibility with the 6502, together with the use of Pascal, could well mean that the device will also be readily compatible with Motorola's 68000, 16-bit processor. The 6502 was a derivative of the Motorola 6800 device, from which the 9900 was itself derived, and retains a large degree of compatibility with it.

Super 65 runs at a 10MHz clock rate and can address 2 Mbytes of memory directly. Some peripheral circuits are under development, including an 80 Mbyte memory management chip.

The company is said to be developing, for late next year, a silicon on sapphire version of the processor.

Opportunities

A REPORT on the opportunities for disabled people in industry is being prepared by the National Computing Centre. A draft copy of the report is currently being studied by the bodies that have contributed to it.

Basingstoke move

A MOVE to Basingstoke is on the cards for several hundred people in IBM's General Business Group currently working at various London locations.

IBM is negotiating a 25-year lease on a 157,000 square foot office building under construction by the Greater London

Council pension fund in Alton Court, Basingstoke. IBM has yet to decide which functions of the General Business Group—office products and small computers—will be moved to Basingstoke, but it has been estimated that the move will begin in 1980.

UK hardware exports up

A SIGNIFICANT increase in the UK's overseas trade in computer equipment between the first and second quarters of 1978 is shown in the latest set of Business Monitor statistics from the Department of Industry. Exports

accounted for nearly 75% of total sales by UK computer hardware manufacturers in the second quarter. The figures show that total exports by UK manufacturers increased from £106 million to £143 million.

Post Office 'yes' to PSS

Confirming Computer Weekly's prediction last week, that Post Office's bid of Telesat Processors for the Packet-Switched Service, PSS, would be successful, the Post Office has announced formal approval of the public packet-switched service.

First customer connections are due late next year and there will initially be nine exchanges, in London, Birmingham, Bristol, Cambridge, Edinburgh, Glasgow, Leeds, Manchester and Reading.

There will be 48K bps links between the exchanges. PSS, the experimental service run by the Post Office, which is not compatible with the CCITT standards to which PSS will be built, will continue at least until the end of next year. PSS will interface to both Euronet and the Post Office's forthcoming transatlantic International Packet-Switched Service, IPSS. The latter will also use Telesat Processors.

IN OUR 96-PAGE ISSUE FOR COMPEC 78

This week's issue leads to Olympia and the biggest computer exhibition held so far. And to match this major industry event, Computer Weekly has published a 96-page issue, a two-section, 88-page issue. This special issue contains a special feature on Education and Training, a special feature on the special work currently being implemented to ensure that these necessary resources are available. FOCUS

NEXT month the special events
division of Intofech International
is staging a three-day super-
computer conference. Presum-
ably only super special DP
managers need attend.

The arrival of supercomputers
on to the DP scene will
obviously call for a new breed of
DP managers. These super
managers will leave the rest of
the DP profession in mass disar-
ray.

According to the conference
brochure, the course content
will include such everyday DP
problems as algorithm evalua-
tion, radar pulse dis-interleaving
and finding the smallest element
of a vector and add fields.

The super manager, it seems,
will have to be fully conversant
with such techniques as the
relative speeds of light, the
resolution of X-rays and adjust-
able barrels: laser beams will not
be limited to Oxford Street.

Part of the seminar is being
devoted to relaxation nets,
though whether these are being
supplied to the delegates at the
close of each day is not made
clear.

What is clear is the impact the
advent of supercomputers could
have on the DP industry. Cur-
rent trends towards distribution,
mini and microprocessors and
electronic offices would be stop-
ped dead in their multi-purpose
tracks. Floppy discs would have
to stiffen their resistance. The

users' brief but welcome power
and prestige would be blown for
several ensuing generations.

Henceforth, Compec will have
to be staged in a Megapac at a
suitably enhanced exhibition
venue. The Institute of Data
Processing Management,
having spent much time and
effort in establishing industry
micro business clubs, will have
to change gear.

The gear in question is more
likely to be Ampla than Apple.
Peta will arrive mammoth-sized.
Juggernaut will replace the
slower machine cycle.

Early users are predictable.
First on the super scene will be
Swansea, seldom slow to accept
a technological challenge. As a
consequence, the current
driving licence turmoil will be
looked back on as a period akin
to affection and admiration.

Other first-time users are ex-
pected to be the various defence
ministries and national police
forces. Not only do they have
the necessary funds and
resources, but also the advan-
tage of allowing little new of
subsequent problems, hazards
and disasters to filter out.

The universities will not be
slow in latching on to the new
computing concept. Thinking
big is part and parcel of
academic computing procedure.
In fact Manchester University is
already co-operating in the pro-
duction of a very fast machine.

Riding waves of Compec puff

NEXT WEEK'S Compec show at
Olympia in London will be the
organismic event of the year for
many companies in the UK
computer industry, before sub-
siding into Christmas time
revenue until the new year.

Compec, like all major exhibi-
tions all over the world, provides
a host of new products, en-
hanced old products and fresh
sales angles on some golden
oldies. And the products and
services on display will be
accompanied by oceans of mar-
keting words in the form of sales
spells from the salespersons and
back-up brochure puff.

And computer industry news
media, like Computer Weekly,
are packed with previews,
reviews and lots of advertise-
ments, selling lots of products.

All this is, of course, a
legitimate and important part of
the free enterprise system and
provides a valuable service to
prospective buyers of equip-
ment.

Yet the unsuspecting poten-
tial user could unless careful,
down in the sea of glossy infor-
mation.

Last week in Computer
Weekly, Nicholas Enticknap
examined one particular user's
experience when trying to un-
ravel the facts behind the DEC
VAX announcement and this
week (page 4) he looks at the
role of the Press in this "product
announcement" process.

However, as he points out, one
of the current facts of DP life is
that suppliers have a sophisti-
cated system via Press officers
and marketing people for
generating news on their ser-
vices and for putting over their
point of view.

Users, on the other hand, are
generally pretty timid and/or
daunted when it comes to
promoting their view in a
positive, proactive way.

Instead, users are generally
publicly silent or reactive,

biting about poor service in
the most generalised terms, as in
the recent BCS user require-
ments report (see back page).

Users visiting Compec next
week should define their own
needs beforehand and stick to
that specification as a lifeline in
the sea of marketing razzamatz.
And, even more importan-
tly, they should resolve to
take responsibility upon them-
selves to do more, in a more
co-ordinated way to ensure that
the industry thrust is not de-
cided, as it has so often been in
the past, by the needs for sales
and marketing men to meet
their budgets rather than by the
user need to meet the business
and administrative require-
ments of their own employers.

THIS is a tale from the "good old
pre-Georgian days" when ICL
900 systems ran nimbly under
"manual" Executive.

Most of the ops' time was then
spent running the XQMY utility
to scratch tapes, which required
the allocation of a deck in its pro-
gram unit number 0, e.g.:

GI #XQMY 21 0

One lunch-time a freelance
programmer was on a rush job
and was given hands-on testing
time. Within ten minutes he
reported that the tape decks
were not working. The shift-
leader checked, called in the en-
gineer, who spent several hours
stripping and reassembling the
decks, without discovering the
fault.

In desperation, he rehired
Executive and, hey presto, all
ran smoothly.

Now the morals of this tale are
particularly clear — software is
more likely than hardware to be
a bug generator — and beware
of letting software live wire
(particularly of the freelance
variety) free rein on the com-
puter.

The fault, by the way, was
that the programmer tried to hit
two clevor by half and tried to
zeroise two scratch two tapes at
once with the instruction:

GI #XQMY 21 22 0

thereby assigning deck 21 as
unit 22 and altering the record-
ing mode to 0.

● This week's £5 interrupt prize
goes to W. Lewsey of Dursley,
Glos.

Ten years ago

Arthur Humphreys (left), managing director of ICL, International Computers and Tabulators, and Bill Barlow, managing director of EEC, English Electric Computers, are pictured at the formal announcement of the establishment of ICL, International Computer Ltd. in Edinburgh in 1968. Each became joint managing director of ICL. Barlow is now Sir William Barlow, chairman of the Post Office. Humphreys has retired. Last week, a dinner took place to mark the 10th anniversary of the formation of ICL.

Algol 68 now available to 30 UK universities

THIRTY universities in the UK
now have access to the Algol 68
compiler on the CDC 7600
machines at the University of
Manchester. The Algol 68
Compiler and last week, Professor
A. van Wijngaarden, the "father"
of Algol 68, inaugurated the ser-
vice at Manchester.

The compiler was written by
CDC Netherlands for the 8000
series and modified at Manover
for the 7600 machines. This new
system will not only enable many
current Algol 68 programs to be
rewritten so as to double their
execution speed, but the addi-
tional features available in Algol 68
will also facilitate many opera-
tions which could only be done
with great difficulty using the
software currently available.
● Pictured with Professor van

Wijngaarden is Dr C. H. Lindsey
(centre, standing), a leading ex-
pert on the language in the UK
and a member of the Algol 68
design team, also two members
of UMRC staff, Mrs Joan Smith
and Tom Bowman.

£50,000 bill for Teesside Poly

SURVIVING a period during
which it was in danger of not
meeting the workload imposed
by the new academic year (CW,
September 14), the computer
centre at Teesside Polytechnic
has now filled many of the
vacant job positions and
upgraded most of its longer-
term staff.

The move is expected to cost
about £50,000 a year extra in
staff wages. The decision to take
on more staff came after it was

GEC set for major investment in the automated office

THE agreed takeover of office
equipment manufacturer A. B.
Dick of Chicago by GEC, due for
completion next April (CW,
November 23) is the first move
in what is likely to be a major
investment in office automation
and information technology by
the British electrical, electronic
and telecommunications giant.
GEC is estimated to have cur-
rent cash balances available for

investment of £700 million, so
the £53 million it proposes to pay
for A. B. Dick will scarcely dent
its cash mountain. The £700 mil-
lion does not include the balance
of compensation due to it for
nationalisation of the British
Aircraft Corp.

GEC seeks a marriage of its
own electronic technologies
with Dick's duplicators, copiers,
word processors and ink-jet
printers, and was also particu-
larly attracted by Dick's 68 US
offices, which will give it a
ready-made US-wide marketing
network for office and allied
products. Dick forecasts \$12.5
million profit in the current year
on turnover of some \$350 mil-
lion. With its formidable cash
reserves there are plenty of US
minicomputer, small business
system and peripherals com-
panies of a comparable size
which can now be regarded as
possible acquisition targets for
GEC.

On the minicomputer side,
investment of £700 million, so
the £53 million it proposes to pay
for A. B. Dick will scarcely dent
its cash mountain. The £700 mil-
lion does not include the balance
of compensation due to it for
nationalisation of the British
Aircraft Corp.

GEC is now bringing GEC Com-
puters out of its shell. The com-
pany has added a new compact
low-cost version of the 4000
series processor (see page 11),
and is beginning a push into the
OEM system builders' market
which has proved so successful
for companies like Honeywell
with Level 6 and Univac with the
V77.

Unfair dismissal plea by director

A CAMBRIDGE Computer Ser-
vices director, Michael Tisler,
who was dismissed from the
company for alleged misconduct
even though he had already
given in his notice, is seeking an
industrial tribunal settlement in
his favour, claiming unfair dis-
missal.

The first industrial tribunal
hearing was on November 14
and the second was planned to
take place yesterday (Wednes-
day).

Motorola adds to the 6800 family

A LOW cost addition to the 6800
family of microprocessors, an-
nounced by Motorola, has a large
package of \$3 each in volume.

Known as the 6805, the device
broadens the company's spread
of 8-bit microprocessors by
moving in the opposite direction
from the 6801, which employs an
enhanced version of the
standard 6800 instruction set.

The 6805 has a depleted in-
struction, the design being based
on stripping out the B accumu-
lator from the CPU. This space is
then used to incorporate a clock
generator, 64 bytes of RAM and
1K byte of ROM.

Communication with the out-
side world is provided by an 8-bit
timer and 20 I/O lines. These are
configured as two 8-bit parallel
ports and one 4-bit parallel port.

Using a low cost, 28-pin pack-
age, the device is capable of
containing more ROM and
RAM, together with specialised
I/O facilities such as A/D and
D/A converters. These are
available as part of the com-
pany's custom design service,
which has three add-ons as
modules suitable for designing
into the part as required.

● Motorola officially opened
the latest addition to its East

Kilbride semiconductor manu-
facturing plant last week
at a ceremony conducted by
Lord Clydesdale, Lord
Lieutenant for Lanarkshire. The
70,000 square foot, two-storey
module effectively doubles the
company's production
capability of MOS devices in
Europe.

Regrading claim

WHILE no satisfactory conclu-
sion has been reached on the
efforts of ASTMS to get recog-
nition for programming staff at
Queen's University, Belfast
(CW, November 9), it looks
optimistic that a claim for
regrading, or the employment of
additional control clerk staff at
the attached Ashby Institute,
will eventually be met.

ASTMS said that it had
already managed to gain an ex-
tra three days' holiday for tech-
nicians and that the university
governors had replied on
regrading that further enquiries
would take place.

'Breadboarding' show

EVERYTHING but the kitchen
sink was on show last week at
London's Seymour Hall, for
those interested in the dedicated
art of "breadboarding" —
building up electronic systems
from scratch.

Much favoured as a spawning
ground for new exhibition ideas,
the hall was playing host to an-
other Breadboard 78.

An Aladdin's cave for all true

electronics DIYers, the show
attracted a wide range of
exhibitors showing everything
from components to computers
via music synthesizers and hi-fi
systems.

Many of the well-known
names of the hobby computing
business were present, including
Nascom Microcomputers with
the Nascom 1; the Newsbear
Computing Store, with its 77-88
microcomputer and an
improved version of the Com-
modore KIM-1 system, known as
Sym-1; the Sintrom Microshop
and the Byte Shop, both dis-
playing a wide range of systems
and equipment, and Techno-
logica, again showing its TICS
micro-based teletext/viewdata
decoder with local computing
facilities.

CASH, to:

DATA-WASTE LTD., 01-960 1000
or EXCHANGE for Bottles of Booze, Scotch,
Vodka, Gin, Brandy, Pernod, etc.

Sperry Univac has finally replaced the sporran.

The Scots have always had a
reputation for looking after their money.
Sporrans were once considered the best
place to keep cash.

They're still as canny north of the
border but now they've found a safer
depository, because Clydesdale Bank
together with Sperry Univac have im-
plemented the largest computer system of its
kind operated by any UK or US
clearing bank.

Just sixteen Sperry Univac V77s
and 1500 counter terminals will handle the
bank's day to day business quickly and
securely.

And they could do the same with
V77s may be small but their capacity is
hard work isn't.

They offer Data Base Management
Transaction Processing, Distributed
Processing plus a degree of communica-
tion flexibility so far unequalled by any
competitive system.

So, if you want to find a safe way
to look after your business, and your
bank balance, learn more about the
Sperry Univac V77 series. Call the
Marketing Director on 01-960 1100.
Or drop him a line at Sperry Univac
Centre, London NW10 8LS.

SPERRY UNIVAC
COMPUTER SYSTEMS

One look at PT7 leads to another.

Our PT7 intelligent terminal is not just a viable
alternative to the ICL 7502 or IBM 3270.
Look at it more closely and you begin to see some very
interesting differences.

As well as handling local data validation, local format
storage and spooling, PT7 allows you to enter data locally
even when the mainframe is down. And data can be
entered on-line and off-line at the same time, by different
display units chosen and allocated by the supervisor.

Our new Format Software for your mainframe lets you
develop formats by calling easily used sub-routines and
then load them down line to the PT7. Then there's data
field mapping, which means that source data can be
accepted in the format and sequence most easily handled
by the PT7 operator and the mainframe program can call
up what it wants by field name.

All this means you save mill time and give the
terminal user more and better facilities. Without losing
mainframe control.

PT7 is proving a big success. We're stepping up
production to meet the demand.

GILB'S MYTHODOLOGY

Has your DBMS saved money?

IT is a long time since I have knocked the DBMS myth in this column, so, knowing it will raise feathers, I'll have another go.

Needless to say, I still haven't found a single clearly documented case anywhere in the world where the database management software was the key to savings or anything else — except unexpected difficulties.

Since then, I have collected a number of cases on the subject which I want to share with you. Following its US study trip, the NCC in its report "DBMS user experience in the USA" said: "Cost benefits were in virtually all cases not quantifiable. We drew a complete blank (on cost justification questions). Implementation costs had in half the systems exceeded benefits."

This correlates nicely with an internal report from one of the oil corporations with many years of both large and small scale DBMS experience, worldwide. Nowhere had it been able to cost justify the use of any of the packages.

Phister, in his incredible collection of hard facts provides a collection of shocking database economics for various industries. In all cases the cost of the database system grossly exceeded the cost of the previous system.

My favourite case is the California State Teachers' system which was ordered dropped by the State Auditors (Astec System) when they discovered that the database gave

them \$38 cost per transaction as opposed to 60 cents (72 times more costly) without compensating benefits.

How do things get so bad? I know, less than a year ago I asked an eight man project group, which had nearly completed a financial database system, what their cost per transaction goal was.

They had no idea, and thought that maybe the cement company financial controller might have a number locked in his head. Included in this case was the amusing situation that they had based their development on a package, which again was based on IBM's IMS.

The performance of this was known to be so poor that the project had concentrated on creating a non-IMS database extract of the IMS database, so that the cost and timing of extracting the company financial data was not too exorbitant.

At an Infotech conference on "IBM — the next five years" in London, Bill O'Connell from Amdahl pointed out that a transaction which took 3,000 instructions in the 1960s required 150,000 with IBM's IMS database system. Progress? I've heard similar numbers about SNA.

The most interesting case added to my collection can be found in the Cincincom spring 1978 meeting, describing Rochester NY Telephone Corp's experience with IMS and Total.

Using an IBM 370/156 under TMS, it had heavily loaded the

SOFTWARE FILE-1

Fortran 77 compiler available early in 1979 for DEC systems

A FORTRAN 77 compiler which conforms to the full ANSI X3.9-1978 standard, has been developed by HPAC Ltd of Oxford. The software — thought to be the first full Fortran 77 compiler — will be available early next year for the DEC PDP-11 and Computer Automation LSI-2.

HPAC, previously known as Hugh Pushman Associates (Compilers) and best known for its Coral 66 compiler, is also working on three further versions, for release later.

These are thought to be compilers for Computer Automation's Naked Mini 4, the Data General Nova and Interdata 16 and 32-bit processors.

The effective portability of the software comes from the use of a common front-end for all the

versions. Written in BCPL, this generates the same intermediate code — an extended O-code — that is used in all HPAC compilers.

One result of this is a high degree of compatibility between the Coral 66 and Fortran processors, which share the same code generator. The languages, for example, can call each other at subroutine level.

On most machines, the code generated by HPAC compilers is rigorously separated into code and data, and is re-entrant at the sub-routine level.

"In practice, the front end is not immutable", commented Peter Burns de Bono, HPAC chairman and managing director. "It is usually adapted to

exploit the features of the target machine."

"Our aim is to make our programs portable, not to ensure that our software is portable." Written by Dr Robert Fink, technical director of the firm, the compiler is said to have been designed to be suitable for processing Fortran IV programs in addition to Fortran 77.

All versions will be priced at £2,500.

SOFT BITS

Datamanager for Tesco

MSP's Datamanager data dictionary has been installed by Tesco. It will be used with both IMS and conventional files, initially on a new warehouse and control system.

PACIFIC for sales, purchase and nominal ledger processing has been bought by Marks & Spencer from Northern Software Consultants. The software will be run on an ICL 1904 M&S Baker Street headquarters.

RECENT purchases of help programs: MMS General Ledger and financial reporting system have included three local organisations: Midland Bank, subsidiary Griffin Factors, Lloyds and Scottish Finance Group, and Fanta (UK) Ltd.

HARVARD University and Massachusetts Institute of Technology have installed Culfin's IMS database management system. Also supplied were the Culfin report generator, On-line Query, Integrated Data Dictionary, and EHP Auditor.

SOFTWARE FILE -2

A lighter touch

ONE of the quietest and lightest APL terminals available is a new version of Texas Instruments' Model 745 from the "Silent 700" range. Switchable between the APL standard Ascii character set, the terminal has a built-in acoustic coupler, a 5x7 thermal dot matrix printer, and weighs about 13 lbs. Operable at either 10 or 30 characters per second, it is priced at £1,435, exclusive of VAT.

DEC PDP-11 applications packs from Hoskyns

A RANGE of application packages for the DEC PDP-11 has been developed by Hoskyns from the successful mainframe product, Modular Applications Systems. Called MAS-M, the new software runs under RSTS/E and is designed particularly for CTS 500 users.

Although derived from MAS, the new system has been substantially redesigned for interactive operation, according to the company. Implemented in Basic Plus 2, it includes a new TP monitor for the PDP-11, which was developed as part of the project.

Hoskyns has initially released modules for order processing, invoicing, accounts receivable, inventory control, inventory accounting, and general ledger.

Owing to pressure on space, Programmer Notes has been held out this week. Providing for step-by-step implementation, they can be referred to if required to batch and database versions of MAS running on a mainframe.

'Full-time standards men wanted,' says Ansi chief

FUNDING for full-time standardisation experts may be the only way to ensure that language standardisation projects keep in step with the natural evolution of a language, according to Frank Engel, who chaired the committee which produced the Ansi Fortran 77 standard.

Speaking to Computer Weekly in London last week, Engel said that the biggest single aid to producing timely and responsive standards would be full-time standardisation committee staff.

Engel, who was for seven years the chairman of the Ansi X313 committee that produced Fortran 77, also identified a less democratic mode of operation as a factor that would lead to quicker standardisation.

"For most of the period we were working on the standard, we met for four to five days, every six to eight weeks. But to make any useful contribution, members had also of course to put in time between the meetings."

"In my case, I really wasn't able to do anything else at all. From 1972, I had no financial backing for the standards work and I estimate that it cost me around \$200,000. You can't expect me to do it."

Ansi requires all standards to be examined at least every five years. The standard may then be re-affirmed, revised or rescinded.

X313 began looking at the previous 1968 standard, shortly

after it was published. "We set out just to clarify some of the points that were unclear in the 1966 text," said Engel.

"There was then great resistance to the idea of a major new standard. However by 1969/70 the committee as a whole realised that a revision was desirable not only to clarify these areas but also to make some extensions."

The basis for extending the standard was a review of existing manufacturers' extensions to the language.

"Subsequently, we polled ourselves on the subject of desirable new features. We aimed to have the standard ready in 1971. The deadline slipped to 1972, then by another six months, and another, and we went on thinking it would be complete any day now until we submitted the draft in 1977."

One problem identified by Engel as contributing to the delay was that some decisions would never be accepted as final.

"Issues already decided would be re-opened repeatedly. Often, the original vote would be reversed at the last moment."

Engel also said that the ideal of perfectly democratic operation was not, in retrospect, the most appropriate though he would have been uncomfortable in a more autocratic role.

"I didn't feel I had the right to exclude informed people from joining the committee. Although Ansi gives the

chairman the power to appoint his own committee, the way we worked was for the whole committee to vote on each candidate.

"I did, though, discourage people from joining in the period up to 1975. Most people — and this was true in my case — join the committee with good local experience of Fortran, but don't in fact know what is in the standard. It usually takes them about two years on the committee to assimilate it."

The attendance requirements — members must be present at two out of three successive meetings to retain voting rights — combined with financial factors to exclude the general public from the committee, Engel noted. Some enthusiastic users, however, did join.

Most members came either

from manufacturers or from governments, but this was not an obstacle except inasmuch that they weren't there because of their own interest.

"Most companies see Fortran as a finished product and their representative's purpose as the maintenance of stability. However, no vendor has used the committee to obstruct the language development and there has not even been a hint of one being an obstacle."

The democratic character of the standardisation effort is perhaps underlined by the history of Engel's own proposals.

Of five extensions he advocated at the start of the effort — character data type, binary data type, array processing, error control and parallel processing — only the first has merged in the new language standard.

Coral compiler for Cyber

NEWS that Systems Designers has produced a Coral 66 compiler for the IBM 370 has been swiftly followed by the announcement that it is also to implement the portable Coral compiler for Control Data's Cyber 170 range.

The 370 version was produced as a private venture, but the Cyber version will be developed by SDL under contract to Control Data in the UK.

The compiler will run under the network operating system, NOSI, and will be available by

next April. It will be marketed and supported by Control Data, with the co-operation of SDL.

Both sets of software will include facilities for Masoc prototyping and are likely to be used extensively as cross-compilers, generating assembler code for a number of different target minicomputers.

No price has been announced for the CDC software but the 370 compiler is sold by SDL on a 20-year licence for £9,500. This Masoc additions are available for a further £2,500.

A record for '79

£84 LESS 10% FOR MEMBERS

Make sure you keep up to date with new and modified hardware in 1979.

COMPUTER HARDWARE RECORD provides the essential details of hardware in a standard format to make comparisons easy. Issued monthly the Jan-Dec titles are:

- VDU's
- Electronic Office Equipment
- Micro Development Systems
- Character Recognition Equipment
- Floppy Disc Devices
- Small Business Computer Systems
- Small terminals and data collection
- Modems and acoustic couplers
- Small distributed systems
- Small and low cost printers
- Small scale communication controllers
- Static storage devices and units

To ensure that you're in touch with new developments in these areas fill in the coupon and return it to: The National Computing Centre Ltd, Oxford Road, Manchester M1 7ED.

To: Hazel Matavers B14, The National Computing Centre Ltd, Oxford Road, Manchester M1 7ED.

I would like to subscribe to COMPUTER HARDWARE RECORD for '79 and I enclose my cheque for:

- ☐ £75.60 (NCC member)
- ☐ £84.00 (non member)
- ☐ Please invoice me (Member/Non Member) details as applicable.
- ☐ Please send further details.

Extended to Assembler and PL/I

PREVIOUSLY restricted to Cobol, the Shadow-Magpen package for users of Altergo's Sindow II TP monitor has been extended to support Assembler and PL/I as well.

Version 2.1 of the software also allows programmers to generate control streams and source hunks directly, bypassing the generation and compilation of MAPD statements.

Shadow-Magpen (Software File, May 11) is sold by Adrem Systems & Programming, of Plinner. An aid to the development of VDU mnps, it takes as input a deck of 24 80-column cards representing the screen format.

With the latest release, users of all three application languages can create input and output control streams and source books directly from the input cards.

The enhanced package could be of particular interest to PL/I users, according to Adrem. Fast to execute, it is said to outperform techniques using compilers.

The resulting savings in computer time would rapidly outweigh the £500 purchase price, argues the company.

Does any reader know another in this language? Set page 61 for solution.

A love-hate relationship

PROGRAMMING for many is a love-hate (or even hate-hate) relationship, expressed here by programmer John Fisher:

SYSTEM CRAFT

I do not love the machines I have come to work,
I do not love
The ranked culls of memory, which killed
The slight of living women
On Taiwan; or the feral speed of the processor,
The exactness of the order code; I have not
Loved the hard, wide-tied Americana, the
horrible salesmen, or the sad
Empty programmers. I hate the part
of me which has this skill.
Cruel, lust-like and musturbatory, solitary and
proud, For I can curl
My whip and the subroutines dance a jig, then
data halt, turn and
Wheel, nor flow lights flick in time to
the sour snarl of
My voice; brilliant and autonomous the program
stands, balanced pulsing
Between my fingers. I hate that skill,
gorgeous means to send
Whole peoples wandering blankly into mist.

But when to feel the brush of autumn
leaves round my ankles,
Like bread and cheese, whisky, good
thought, and all the fruitfulness
Of day, is not enough; and when I
have rejected the solid
Regard of friends and the excellence of love, and
ceded in despair the difficult
Objectives of the future; then sovereign in my
hand, and even in the cold of the deep
Night, indifferent, and quick
in the darkness and blackness
of the unknown Kingdom.

HOW RESPONSIVE IS YOUR DATA PROCESSING?

Are you sitting comfortably — with your hand on your heart? Then we'd like you to ask yourself a few questions about the scope and response provided by your current Data Processing facilities.

1. Is your current D.P. set-up capable of handling a variety of processing methods including distributed processing, remote job entry and on-line work? ☐ YES/NO
2. Can it cope with all your peak loads now and your growing requirements in the future? ☐ YES/NO
3. Do your systems tools make it easy to develop new applications using database techniques? ☐ YES/NO
4. Are you obtaining the benefits of the most advanced technology, such as mass storage and telecommunications? ☐ YES/NO

Answering No to one or more of these questions is often one of the basic reasons why many people use Lowndes-Ajax computer utility services. As you may have guessed, the answer to all these questions is Yes when you are with Lowndes-Ajax. We provide either an alternative to your own in-house operation or complement it.

You may have other problems. Perhaps you need help in transferring your systems to IBM technology. Or you may need processing capacity while your own set-up is up-graded. You may need network services or wish to link minis to a mainframe. Or you may want to use a terminal-oriented system.

To see how these problems can be resolved when you fit Lowndes-Ajax into your plans, please contact or send the coupon to:

Michael Reeve,
Lowndes-Ajax Computer Service Limited,
Milton House,
Milton Road,
Croydon

Office 1270

PEOPLE AND EVENTS

Control Dataset's managing director

MANAGING director designate of Control Dataset is Terry Cave, who will take up his new position on December 1. Control Dataset is the business products division of Control Data.

Cave was a computer supplies salesman with Precision Data Co. when it was acquired by Control Data in 1970. In 1971 he became sales manager for consumable products (punched cards, printer ribbons, etc) for CDC, then in 1972 was promoted to UK sales manager for all business products.

He was DP marketing manager for

the government district from 1974-5, when he took on his current responsibility of regional manager of DP systems sales.

The new position of director of systems and peripheral sales at Control Data is taken by Alan Arnold, who will retain his responsibility for OEM and peripheral subsystem sales, and add to these the direction of DP systems sales.

Another new CDC post, that of manager, business development, is taken by Alan Weaver, previously manager, financial analysis and planning.

USER GROUPS

ICL Data Entry Users' Group

THE ICL Users' Association for Key Entry Users became the ICL Data Entry Users' Group in 1977, and is divided into a Northern and a Southern Group.

In 1978 it was made a member of the main ICL Computer Users' Association, which is open to mainframe users, and amended its constitution to include users of ICL

programmable data entry products, that is, 8950/59 series and 1500 series equipment.

The association welcomes inquiries from users wishing to become members, who should contact the chairman, John Wilcox, at Brook Street, Bureau of Mayfair, tel: Portsmouth (0705) 27722.

CIL System 90 Users' Group

THE System 90 Users Group was established in October of this year. Membership is open to all organisations operating System 90 equipment, whether obtained directly from the manufacturer, Computer Instrumentation Ltd, CIL, or as part of another system.

Users may become members by writing to the secretary and all users are urged to do so, even if they cannot attend meetings, since the bigger the membership, the more power the Group will have to cause improvements to be made.

CIL are being invited to participate by sending a representative to meetings.

Chairman of the Group is Chris Johnson of the Building Research Station, and the secretary is Mike McGuire of British Rail's Research and Development Division.

Correspondence should be sent to Mike McGuire, Room 418, Kelvin House, Railway Technical Centre, London Road, Derby DE2 8UP, which is also the venue for the next meeting on January 24.

Cocks

Tull

Sullivan

Cairdwell

Michael Cocks of Cincom has been appointed director of European operations, based in Brussels. He is also the first European manager to be appointed to this operating committee. He was previously director of marketing, Europe.

Penny Tull, marketing executive and company secretary of F International, has been appointed to the company board.

Dave Monk of Texas Instruments' European digital systems division, formerly marketing manager for computer products, has been appointed UK marketing manager for all digital systems products.

Former product marketing engineer Bill Caldwell becomes the division's product marketing manager for commercial computer systems; Harvey Labban has moved to TI's European HQ in Nice as European product strategy manager for data terminals, and replaced as product marketing manager for data terminals and peripherals by Bill Sullivan.

van, previously Northern region manager in the Manchester office.

Previously a senior field sales engineer with TI's Slough operation, Simon Heywood-Jones becomes UK sales manager for data terminals.

Doug Shepherd has joined Rediffon Computers as systems analyst for the London branch, from Selko Time, where he was a programmer. Programmer Martin Dines has been promoted from programmer to systems analyst for the South-East branch at Rediffon.

Max Edwards has been appointed marketing manager, based in Reading, of Perex, the manufacturing company within the Sintrom group. Until recently he was manager, technical support with DRI. David Lewis, previously sales manager for the Western European region with Data Research Heads, becomes Eastern area sales manager for Sintrom Electronics, based at the London office.

Edited by Nancy Pocock

Obituaries

Peter Dann

THE death has occurred of Peter Dann, deputy chairman of Gorr Electronics and managing director of Gorr Data Systems. He was 45.

Peter Dann acted as the London representative of International Research and Development Co of Newcastle-on-Tyne before joining Gorr Electronics in 1972.

In 1974 he became managing director of the latter, and helped set up Gorr Data Systems which was created to sell computer-based time recording and security equipment manufactured by the Swiss parent company. He was managing director of the now company on its opening in August, 1978.

Alfred Elliot

Alfred Elliot, managing director of Potter Instrument Company and Potter Data Products, died suddenly on November 18 at the age of 53.

After having spent the war years as a rear gunner on Lancaster bombers, Alf Elliot joined Powers-Samas and became an engineer on the company's punched card equipment. He spent several years with both

Peter Dann

Powers-Samas and ICL.

He left the computer field in some time, then rejoined in 1970 when he became sales administrator with Potter Instrument Co.

He subsequently held positions of sales manager, European operations manager, and director, and in 1977 was managing director.

Cafs for directory inquiries?

THE directory inquiry lady on the left may eventually give up thumbing through over 80 telephone books and switch to operating the VDU pictures on the right if a three-month trial of ICL's Contents Addressable File Store disc sub-system at Post Office exchanges in Leatherhead and Leeds (CV, October 12) proves a success.

Run on an ICL 1803A at Bicknell, the Cafs system enables operators to obtain for quicker replies to directory inquiry interrogations and removes the need for a large amount of shelf storage space for the printed directories.

At present, only about half, or 7.5 million, of the total number of subscribers are listed on disc,

and the operators at Leatherhead and Leeds communicate with the 1803A via ICL communications controllers and permanent PO lines.

The trial will cost the Post Office about £1.5 million, and could lead to a nationwide changeover to a Cafs-based inquiry system by 1985 if it proves to work well.

In the meantime, however, the Post Office is to overcome the storage space problem by putting all the printed volumes on to microfiche and operators will use specially designed readers, 5,500 of which have just been ordered from a UK manufacturer.

Home Office lists Met's 'intelligence' system

The existence of the Metropolitan Police's computer system for criminal intelligence has been officially admitted by the Home Office (CW, December 9, 1978). All that Shirley Summerskill, Home Office Under-Secretary, would say about the CTL machine was that it stores indices to crime, criminals, and their associates.

Dr Summerskill was replying in the Commons to Scottish Nationalist MP Douglas Crawford who asked her to list all the

police computers in England and Wales.

She also named an experimental system being run jointly by the Home Office and Thames Valley Police to analyse and process records from force "collators". The hardware is from Honeywell.

Also listed were the Police National Computer at Hendon, which consists of twin Burroughs 6800s, and a GEC command and control system used by Suffolk Police.

White House gets a warning about viewdata

From Cameron Davis in Washington

"TELETEXT and viewdata systems represent a clear indication of the technology being ahead of the need," says Charles Ferris, chairman of the US Federal Communications Commission. "Lots of creative things could be done with these systems, but the consumer hasn't even thought of doing them yet."

Addressing a White House Press briefing on information and communications technology issues, Ferris said these computer-based information systems needed careful study by both industry and government to resolve such matters as the impact on the telephone plant, standardisation, who can provide the services, and who should regulate the services.

Speaking for the group that would probably regulate the use

of teletext/viewdata systems, Ferris said, "I hope the FCC won't retard development of these efforts." He promised that the Commission would begin now to look into the legal and regulatory ramifications of employing these systems.

The UK has a generally agreed two-year lead in viewdata technology with its Prestel service, and the BBC and ITA have been in the forefront of teletext developments with their Ceefax and Oracle systems.

But in the US a number of companies, including Texas Instruments and telecommunications giant GTE are actively engaged in viewdata experiments, where they will be competing with Prestel, which is being marketed in the US by the

GEC Computers adds three low-cost machines to 4000 Series

AIMING to double its rate of sales over the next year, GEC Computers has added three completely new low-cost micro-programmed machines to its 4000 Series. The company has also introduced the 4085, a semiconductor memory version of its existing top end system, the 4082.

The three new machines are the 4080 and two unassociated products, the 4082 and 4085. The three differ only in the amount and type of memory. The 4080 and 4085 have 256K bytes and one Megabyte, respectively, of semiconductor, while the 4082 comes with one Megabyte of mixed semiconductor and core for applications like process control that require the non-volatility of core.

But the essential feature shared by all three machines is the use of the Advanced Micro Devices 2901 bipolar 4-bit slice chip set together with 2,000 words of 64-bit wide micro-programmed PROM to reduce the number of CPU boards to two. This compares with the 15 boards used in the CPU of the top end 4082.

The one big drawback of using microprogramming is that the power of the 4080 machines is significantly lower than the bigger 4000 series machines, being only half that of the 4082.

In employing the AMD 2901 chip set, GEC is following the lead of a big group of US and European computer manufacturers, including Ferranti and Computer Technology, which uses the set in its new 8040 system (CW, October 5).

The three 4080 machines are completely software compatible with the bigger 4000 series computers and come with the OS 4000 transaction oriented

operating system and a wide selection of high level languages, including RPG II for business applications. In addition, GEC plans to introduce a Cbnal compiler next year and an extended Basic.

Cincom's Tntal database management system is available now.

To get 4080 sales off the ground, GEC is offering discounts of between £4,000 and £5,500 to customers who visit its stand at Compec next week and then place an order before March 31 next year. For example, a system with a 102K main memory, two 35 Megabyte disc drives, eight I/O channels, a 300 lpm printer and one VDU will cost £48,000 instead of £54,000. The price includes RPG II and OS 4000 with its program development and batch facilities, as well as transaction processing, GEC will demonstrate packages at Compec and plans to sell the 4080 to customers through commercial applications and software houses. One such firm is Ian Martin Computers Ltd, general developing a library of general purpose packages, including payroll, sales and bought ledger and also software for specific applications in insurance, pharmaceutical, wholesaling, civil engineering and contracting.

Managing director of GEC Computers, Alan Fraser, said that sales of 4000 series machines are now running at £1 million a month and that the plan is to double revenues over the next year, and then again in the following year. He added that the staff at the firm's new factory at Dunstable was being expanded from 100 to 200 and that a second factory would soon be opened there.

THE BEGINNING OF A NEW ERA IN MATRIX PRINTERS

The Dataproducts M-200

Now you can get Dataproducts reliability in a low-cost 200-LPM Matrix Printer.

How did we combine the low cost appeal of a Matrix Printer with high performance, high reliability characteristics?

- First, we gave our M200 Matrix Printer a dual column, 14-wire head designed to fight heat build up.
- Next, we engineered our two-in-one head for a 300 million character life, about 3 years of normal use.
- Any operator can change the M200 head quickly and easily.
- We incorporated a Universal Character set, and easy forms loading (front, bottom, rear).
- And we made it to print condensed and expanded types.

- Finally, we gave this New Era printer an average speed of 200 LPM (for 80 columns) and made its interface compatible with all Dataproducts printers.
- The M200 table-top and pedestal models should require no more than two service calls a year and are designed to eliminate scheduled preventative maintenance.
- All of which gives you the extraordinary low price/high performance ratio, low down time, and low life cycle cost you want.
- Put our Matrix Printer in your line for a new era in reliability and economy.

Buy a Versatec hard copy unit for £7,500 and get your line printer FREE!

Versatec hard copy systems operate as:

plotters at one inch per second, line printers giving 525 to 1075 lines per minute. They will:

- interface with the HP 2648 Tektronix 4000 series and most raster video terminals,
- produce hard copy from between 1 and 8 video terminals, operate on-line with most popular computers.

With one printer/plotter a Versatec Hard Copy Unit does the work of three peripherals—hard copy device, system line printer and plotter.

For more facts and information complete and post the coupon today.

Please tell me more about:

- ☐ Versatec hard copy systems

DE SPECIAL ANNOUNCEMENT

Professional Dealers Required

Data Efficiency Limited

ANNOUNCE A NEW DIVISION: microsense computers

We are pleased to announce that we have established an exclusive agency for MICROSTAR Computers manufactured by MICROSTAR CORPORATION of the U.S.A. The MICROSTAR line of computers is unique at its price, less than £5000, since it offers a MULTITASKING, FLOPPY DOS, 64K RAM, 12MB (two 5 1/4" drives), BASIC, & UPDATE™ DBMS. The system includes a charging RS232C I/O interface and can also run a further 16 programs simultaneously. CP/M DOS also available.

We invite enquiries from qualified Dealers who wish to represent MICROSTAR systems in specific territories in England, Wales and Northern Ireland.

We also have certain area Distributorship opportunities in the Apple-based ITT 2020, and are looking for Dealers in the thirty-mile radius of the Home Counties (including Kent, Surrey, and the counties of Devon and Cornwall).

Applications should preferably be made in writing to: Bill Mercer, including relevant supporting documentation, to: Bill Mercer, Homebased Computers (0442 65201).

Maxwell Road, Maryland Avenue, Hemel Hempstead, Herts. SG9 6LH. DATA EFFICIENCY will be working as COMSPEC, where the Dealer will be welcome.

European Space Agency 2980s pass 504-hour benchmark

TWO years and two months after the contract date, the two ICL 2980s at the European Space Agency establishment in Darmstadt have finally been accepted. ICL will get the contracted price for the machines following settlement of minor contractual issues which should be resolved by the end of the year.

In order to reach this point, the two 2980s had to undergo a continuous 504-hour benchmark of the entire system which ran round the clock for 21 days from September 11 to October 2.

There are three major applications running on the 2980, and all three — spacecraft control, information processing and dissemination, and meteorological analysis — returned availability figures well in excess of those required for acceptance.

Since the benchmark was completed, there has been a nine-day period without a single failure, and all failures which have occurred have been in the hardware, giving the special ESA version of the VME/K operating system a clean bill

of health. "We are now fully satisfied with the 2980s," an ESA spokesman told Computer Weekly. "We do not anticipate any significant changes in the 2980 system, which we expect to continue in service for another four or five years."

All this has not been achieved without enormous effort. "It was more difficult than we expected," said the spokesman, "but because of the efforts of ICL, the software contractors and our own people, we have managed to overcome all the

problems." It was necessary to expand the main memories of the two 2980s from the original 2.5 Megabytes to 1.75 Megabytes each, to get the required performance. The data being processed comes from the Meteosat weather forecasting satellite, and at present is being treated as test data, although it is passed on to weather forecasting centres in Europe. The plan is for the second flight model of Meteosat to be launched by 1980 on the European Ariane rocket.

Maintenance of micros

THIRD party maintenance for micro systems is following the pattern of the mainframe and minicomputer markets with the announcement of an agreement between Zilog and Milia Associates to take effect on October 1. Purchasers of Zilog MC2-1 systems will be offered maintenance contracts with Milia through Zilog or its UK agents: Camor, Momec and Micropower.

This follows similar agreements made by BWTPC with Computer Field Maintenance and by Computormart with Cable and Wireless covering the main range sold by Computormart.

MIRABITO... "large systems a major growth area for the company."

Demonstrations of Burroughs' specialist processors to begin 'before year end'

CUSTOMER demonstration of Burroughs' two major specialist processors, the Burroughs Scientific Processor and the Advanced Fortran Processor, will begin before the end of the year, chairman Paul Mirabito told Chicago Investment analysts. He said that the large

machines were undergoing final trials at the company's Great Valley, Pennsylvania facility. The Attached Fortran Processor is a back-end processor for the large-scale B6800 and B7800 mainframes, and Mirabito says that output of these doubled in 1978 over 1977 in terms of units

manufactured, and that a substantial further increase will take place next year. Mirabito told the analysts that Burroughs sees its large systems as a major growth area for the company, but stressed that mid-range systems were proving much more successful than some observers had predicted.

"As far as Burroughs is concerned, we regard medium systems as a growth-oriented part of our total systems capability," he added. The "excellent new systems" are on the way in the mid-range 38-38-4800 line.

He revealed that the emphasis in research and development is now on software, and noted that the high cost of custom programming was making the use of standard application packages a fast growing business even with top end users.

Research and development expenditure is currently running at \$140 million, just under 7% of turnover, and is up 15% over 1977.

Noting that Burroughs had the strongest balance sheet in its history, Mirabito added that it was in a strong position to make acquisitions in the whole field of information management.

The company was close to its target of 20% pre-tax profit on turnover, and planned to double turnover every five years, he said.

How the mini firms fared

A REVIEW of the performance of microcomputer stocks has been published by Evans & Co. the Wall Street stock brokerage firm. Despite the current conditions of the market, the review, which covers the first nine months of 1978, shows that investors in many microcomputer manufacturers did well, most recently as September 30.

The main % changes in share prices for the first nine months of this year are given in the table below:

Computer Automation	+18.4%
Data General	+21.2%
Original Equipment	+8.7%
General Automation	+15.4%
Management Assistance	+13.0%
Modular Computer	+12.2%
Prime Computer	+18.0%
Wang Laboratories	+8.3%
Tandem Computers	+33.7%

Handbook for first-timers updated

ASHD at the first-time computer buyer, the First Computer Handbook, originally published a year ago, is now available in a new edition with an expanded section listing software houses in the business, and supplies of systems and ancillary equipment.

The Handbook includes sections on sizing a project, integrating feasibility, system selection and implementation. The latter section covers the conversion of systems, the implementation of a system, and the checklist of potential risks, system requirements and implementation activities.

A new 8-page leaflet of details is offered separately by the publishers of the Handbook.

First Computer Handbook — the Management Guide in the Computer, 19th ed. is published by the Computer Handbook Group, Whitley on Wyke, Hereford HR3 6BR.

The company was close to its target of 20% pre-tax profit on turnover, and planned to double turnover every five years, he said.

E-Series in January

From front page

Group, in London for ICL's "Towards the Automated Office" seminar at the Cumberland Hotel, also talked to Computer Weekly about the E-Series.

Less precise about the timing of the announcement, though he expected it in the first six weeks of 1979, Kutnick thought that the E-Series would not be directly comparable with System 370.

Like Orlansky he expected only some models to be announced initially, and thought they would be mid-range E-Series machines pitched at the 370/135 level.

PO runs out of modems

From front page

code modulation while achieving the same quality of reproduction.

The TES evaluation is being carried out at the Post Office research centre at Marlesham Heath, Suffolk, and the PO says that it could take up to two years to determine if TES is sufficiently advanced to be used for digitising speech in the proposed System X public telecommunications network.

The man leading the development of TES at Bath Professor William Gosling of the School of Electronic Engineering, told

He also thought that it might well feature microcomputer-type database architecture rather than traditional mainframe architecture.

About the H-Series success to the 3030 series large-scale machines, Kutnick had no doubt. "The H-Series will definitely have database architecture, with several powerful processors dedicated to single tasks like file access and communications handling attached to a very fast central bus," he said. "The H-Series will be a mainframe world, not a minicomputer world, and it will pioneer the 1979 architecture with its Critterbus."

Computer Weekly, that microprocessor-based kit for converting PCM to TES and vice versa could be inserted in a series-based network in a matter of many conversations on a channel.

Unlike PCM, which has an amplitude of a wave sampled several times a second, converts the wave into a series of pulses, each pulse of a different width, and the time interval between pulses. The time interval belongs to

LETTERS TO THE EDITOR

Three-part plan for overcoming manpower crisis

THE present serious shortage of manpower in the computer industry is continuously highlighted in your pages by union leaders demanding increased allowances, local government bemoaning its inability to attract suitable staff and micro manufacturers stating that technology is being limited by the non-availability of suitably skilled manpower.

Perhaps the most obvious sign is the increasing size of the job advertisement section. It is a strange comment upon our society when this problem is placed in the context of the present high levels of unemployment.

The most irritating aspect of the present manpower shortage is the apparent inability of the industry to find any positive solutions to the problem, seeking only to treat the symptoms by demanding ever escalating salary levels (which is of course an admirable objective) or complaining about the high cost of agency staff recruited to meet the shortfall.

The next set of symptoms to be treated will, no doubt, be the parasitic depens of the agency world, with one of the more "nutty" of the extreme political groups descending like vengeful angels upon them.

Mind you, it must be said that the agencies are in danger of becoming just that, rather than remaining a valuable source of short-term manpower for high priority projects.

The main problems to be faced when seeking a solution to this shortage are, I believe, simply identified:

1. Computer staff are nearly always a part of a small unit attached to a large organisation. This small unit size makes support of effective training programmes difficult;

2. The education system is not at present oriented to the teaching of sciences other than perhaps social sciences;

3. The products of universities are not in the main trained in function in a commercial environment; and

4. The training boards as at present established are aimed at

the functions of industry itself and the interests of the small percentage of computer units are not considered.

I believe that if this problem is to be overcome a three-part strategy is required:

1. Pressure must be placed upon the schools and the education authorities to give more importance to the teaching of real sciences and to provide a basic appreciation of the employment opportunities that are available in the high technology areas;

2. Effective training courses must be demanded from the further education centres which would fit students for the commercial environment, rather than the present situation where the emphasis is upon such esoteric aspects as linear programming and boolean algebra and the teaching of such quaint languages as Fortran. Instead, syllabuses should reflect such useful topics as Cobol, concepts of program and file design, structured programming and database/communications concepts; and

3. The final element should be the creation of a body to both co-ordinate and encourage the small fragmented units of our industry to undertake the training of staff rather than to recruit continuously skilled manpower.

There are already two national industry based organisations that are ideally placed to help in this process, but it would appear that neither has the will to do anything useful to overcome the present difficulties.

They are the BCS, which seems to have only one real desire — to become an exclusive and perhaps as useless as many of the other professional institutions, and the NCC, whose main function would appear to

be to publicise itself and to talk about what ought to be done while ensuring that it does as little as possible.

If either of these two organisations would take an effective lead in the creation of "computer apprenticeships" and if the government would provide appropriate training grants then, given the high demand that already exists by untrained people to enter the industry, the present manpower shortage could rapidly be resolved.

Private Eyeful?

The aside story by your columnist Ched about my business interests regrettably fails to say that I told one of your reporters, among others, the facts you now quote against me.

If you want to be the Private Eye of the computer world please remember next time that as a director of the company you mention I have never received any remuneration or expenses of any kind from that company, or

any of its clients. Obviously I am a failed philanthropist.

KENNETH WARREN, MP
Goudhurst,
Kent.

KENNETH Warren did not reveal to one of our reporters the fact that he is associated with the public relations firm handling OCR Scandata — Editor.

Sharing some of the limelight

I READ with interest the article entitled "Oiling of distributor's net" by Ruth Stein and, in order to keep the record straight, I would like to point out to you that some parts of the article are incorrect.

In 1975 we allowed Computer Design Systems to produce a system for us, the specification of which was provided by the National Computing Centre. At a later date we introduced

CDS to Shell following a telephone call to one of their distributors who, together with other oil companies of my acquaintance, attended an exhibition at the Arndale Centre, Manchester.

The program then available was demonstrated by our own operator, Mrs J. Worthington. We feel that following the success of this system and the

use of it by Shell, we would like to share in a little of the limelight.

Correspondence confirming the above is available.

A. KREIKE

TEST EQUIPMENT FOR ALL DATA COMMUNICATIONS NEEDS

When a data communications network develops a fault you pay in time and money until it's found and corrected. With Halcyon equipment you can isolate and diagnose a fault comprehensively and quickly — and you don't need a PhD or a fortune to do it.

The 803A MicroFox is a data link analyzer for monitoring and generating test messages and diagnostic programmes. It is flexible and versatile and is suitable for the data communications specialist, or the unskilled operator who can access stored programmes.

Digital or Analogue Software, timing, control, computer, modem or line — wherever the fault, whatever the fault, find it quickly and easily with Halcyon equipment from Borer.

The 803A and 621A are only two products from a wide range of digital and line test equipment.

The 621A Universal Test System is a comprehensive telephone line analyser that independently measures and displays all the parameters relevant to data communications. Its ability to distinguish between different types of noise enables it to give a true picture of the line condition. The 621A incorporates the unique Signal Impairment Display (SID) which gives an at-a-glance indication of all significant impairments.

Fourth normal form files

I HAVE been reading the first of Max Stewart's articles (CW, October 26) on relational databases in your 10-week tutorial series. In two of these articles, you refer to relational files as "fourth normal form" files.

I have previously come across several other sources of material on relational files and, in all of these, the files are referred to as "third normal form".

I would be grateful if you could explain to me what fourth normal form is and/or its difference from third normal form.

I would like to add that I find your articles easy to read and comprehend: which is more than I can say for some of the other articles I have read on the subject.

R. DALE
Caddington,
Bedfordshire.

MAX STEWART replies: Fourth normal form superseded third normal form as an ideal file structure in 1974. The difference between the two is discussed in Part 9 of the series.

15 years' non-stop service

IT MAY be of interest to some of your readers to know that the English Electric KDF6 and eight IBM computers along with a 1040 line printer at BSC Rotherham Works, Aldwarke General Offices, were finally closed down in mid-October and taken off site on Tuesday November 16, 1978. They had been almost 15 years' of continuous 24 hour seven days a

week service. There are still two KDF6s and one KDF6 working on the Aldwarke site in the Primary Rolling Mill, and to my knowledge they are the last of these second generation machines.

Participative systems design

PART 4 OF A SERIES BY
ENID MUMFORD, FRANK
LAND AND JOHN HAWGOOD

Aim is to improve the relationship between individual and his work

A PARTICIPATIVE approach to systems design means that the employees of a department or their representatives, as part of the design process for a new computer application, construct a new form of work organisation which is based on a diagnosis by them of their own needs.

There are a number of philosophical approaches to work design which such design groups may want to consider. The two most frequently used are job enrichment and the socio-technical approach. Job enrichment focuses on the job of the individual worker and tries to build up his job in such a way that it increases in interest, responsibility and challenge.

The job may be extended by adding to it preliminary activities such as setting it up and acquiring the necessary materials, or completion activities such as final quality inspection and the rectification of errors, tasks which previously have been carried out by other individuals.

The aim of job enrichment is to improve the relationship between the individual and his work.

The socio-technical method was originally developed by the Tavistock Institute in London and this takes a very different approach. The concept of a socio-technical system is derived from the premise that any production system requires both a technology, a process of transforming raw materials into output, and a social structure linking the human operators both with the technology and with each other.

A socio-technical system is any unit in the organisation

composed of a technological and a social sub-system having a common task or goal to accomplish.

If we are concerned with clerical systems based on the use of a computer the technical system will consist of the tools, techniques and procedures used for processing the raw material of information.

The social structure is the network of roles, relationships and tasks which interact with the technical system. The purpose of the socio-technical systems approach is to produce technical and social structures which have a high capacity to achieve technical and social goals and which reinforce each other in the achievement of these goals. The socio-technical approach aims to improve the relationship between the group and its work.

Socio-technical analysis incorporates a logical analysis of the technical components of the work system (machines, procedures, information) and the grouping of them into "unit operations".

Unit operations are logically integrated sets of tasks, one set being separated from the next

by a change of state in the input or product.

For example, in a purchase department the tasks of preparing accounts data for a computer, putting the data into the computer and correcting errors is a logically different set of activities from matching accounts with goods received notes and investigating discrepancies.

Work design which uses a socio-technical approach identifies unit operations and allocates one or a number of these, depending on their scope and complexity, to each work group.

In this way the group receives a meaningful set of tasks which makes a substantial contribution to the development of a product or provision of a service.

The work group then has the responsibility for allocating tasks among its members and for training its members so that eventually each individual is competent to carry out all tasks.

This approach is in marked contrast to the functional philosophy found in many firms, in which work is split into a number of small tasks; each employee being allocated one task only.

The analysis of the social part of the work system consists of analysing the relationships within the system. In other words establishing who needs to work with whom for the system to function efficiently. In addition an analysis is made of the job satisfaction needs of individuals in the department.

A technique of participative systems design has been created by three specialists in computers and systems management, following recent criticisms that systems designers have failed to include the views of all users in their design specifications. This is a fourth article in a series of five by the three specialists: Enid Mumford, of the Manchester Business School; Frank Land, senior lecturer in computers and systems analysis at the London School of Economics; and John Hawgood, director of the computer laboratory at Durham University.

dividuals in the department, using the theoretical framework described in an earlier article.

An important aspect of the socio-technical approach is the notion of "control". A further analysis of the technical part of the system is carried out using the "variance analysis" technique which identifies parts of the system where problems tend to occur because there is difficulty in achieving desired standards or norms. These problems are due to system weaknesses rather than human errors.

Operational efficiency is then improved by giving each work group the responsibility for eliminating and correcting variances which occur within the set of unit operations for which it is responsible.

Job satisfaction is also improved through handing over this control function to the group as the prevention or correction of problems usually requires intelligence and initiative.

The group requires a set of problem solving skills to enable them to handle variances successfully and the acquisition of these involves an enhancement of the knowledge of individual group members. It is believed that responsibility for, and ability to solve problems, increases the interest of work and provides a sense of achievement.

Any design group, and the professional systems analysts in it, requires a knowledge of these two approaches to work design once they begin working out the structure of the new system.

riching the more routine jobs in the department.

The third alternative, and the one finally chosen, was a compromise between the first two.

The majority of clerks in the department were to be organised into autonomous groups and provided with the opportunity of increasing their grade and salary as they became experts in all the tasks which the group was responsible for.

A small specialist group would be created to meet the needs of a number of senior clerks who thought that joining an autonomous group would reduce their status.

In addition a service group would be created with responsibility for a number of routine tasks such as photo copying, filing and handling the mail.

The service group was a response to the request of a number of older clerks who said they wished to do routine work and did not want the stress of acquiring new skills.

These three strategies were discussed with all clerks in the user department at a meeting chaired by the senior trade union official and the third alternative was accepted on a show of hands.

It must be emphasised here that the design group had previously discussed all three strategies in detail with senior and line management and management had indicated that any of the three would be acceptable from management's point of view.

at the heart of it, surrounded by

a network of 28 PDP-11/34 minis. The requirements of ultra reliability in air traffic control applications dictate that the two central systems, and handling radar tracklay and the other handling flight data processing, must be triplicated. The systems will therefore each consist of three VAX-11 processors.

VAX-11/780s at heart of Austrian radar system

ONE of the first major applications of the powerful Digital Equipment VAX-11/780 is to be a radar and flight data processing system being built by Federal Office for Civil Aviation.

The system being built by Plessey, under a £9 million contract, will have six VAX-11/780s

at the heart of it, surrounded by a network of 28 PDP-11/34 minis. The requirements of ultra reliability in air traffic control applications dictate that the two central systems, and handling radar tracklay and the other handling flight data processing, must be triplicated. The systems will therefore each consist of three VAX-11 processors.

NEWS IN BRIEF

Lomac files \$250,000 suit

A manufacturer of computer process control equipment for semiconductor fabrication, Lomac Corp., has filed a \$250,000 suit to prevent Logical Media Corp. from using "Lomac" as a trade name in the media.

Logical Media Corp. built the "no software" test system, says that it has dropped referring to Logical Media and hopes to settle matter out of court.

Terminated

MANUFACTURE and testing of the 200 chip gate array Model 765 teleprinter has been terminated by the company only a few weeks after commencement of the project. Centronics said that the machine was wrong. No 765 deliveries have been made by Centronics in the UK.

Micro range

THE 100-BASED computer range of the 200 chip gate array Model 765 teleprinter has been terminated by the company only a few weeks after commencement of the project. Centronics said that the machine was wrong. No 765 deliveries have been made by Centronics in the UK.

Double density

AN IBM compatible disc drive that can store 635 Megabytes of data, twice the capacity of the IBM 3350 - has been announced by Storage Concepts. Called the SIC 800, the new drive offers a 100% increase in capacity of the existing 3350 and a new servo system to improve read/write reliability and minimise seek time.

Birmingham office

To handle its rental services, ITC Computer Services (UK) of Slough, the UK operation of the US based timesharing computer systems manufacturer, has opened a new office in Birmingham. It is the first of a number of offices in this country and it will have two ITC 4000 systems, and a 311 3000.

Boiler design

INDUSTRIAL boiler design calculations previously performed on a timesharing basis on machines now being done in-house at NEI International. Combustion on its new 2000 Prime 400, NEI has written its own design software to run on the system, which has six times the active terminals, a remote terminal and a job entry terminal with a 600 line printer and tape peripherals.

Premier grows

LEASING company, Premier Computers, has increased the size of its worldwide portfolio of about 50% by acquiring the UK portfolio of the US based leasing group, Gilbank. The Gilbank group, which has 14 offices in the UK, is now part of Premier's UK operations.

One-day shows

A SERIES of one-day exhibitions presenting a variety of computer peripherals and software companies is to be held at the Institute of Direct Marketing, London, next week. The shows, one at each of the Institute's four venues, will be held on January 10, 11, 12 and 13. The shows will be held at the Institute's four venues, which are: the Institute of Direct Marketing, London; the Institute of Direct Marketing, Manchester; the Institute of Direct Marketing, Birmingham; and the Institute of Direct Marketing, Leeds.

MICRO NEWS

Micro sales up 12-fold by 1986—Pactel

A BIG jump in microcomputer sales, from \$69 million, to \$832 million, or 12 times more, by 1986, is predicted in a new report on the microcomputer. Published by Pactel at \$995 a copy, it is called The Microcomputer Marketplace in Western Europe, 1978-1986, and is pitched primarily at the semiconductor manufacturer, providing data on the total size of the micro market in Western Europe, with percentage splits within that market, through to 1986.

One of the Pactel Market Series reports, from the company's Product and Market Planning Division, it should be noted that its prediction of an \$832 million market in eight years' time is based on fixed 1977 prices.

The report is disappointing in that little effort seems to have been made to look beyond the semiconductor manufacturers' own end-user market — the OEMs and equipment manufacturers — to examine the potential of the ultimate end-user marketplaces.

Mike Robson, who was responsible for the preparation of the report, confined himself at the launch last week to the prediction that "the ultimate end-user market would be many times greater in value than these microcomputer market figures."

He suggested that one of the most significant developments of the near future would be the results of the government's efforts to promote the use of microprocessors and microcomputer systems in industry.

Statistics have shown that the government has an uphill struggle in this task, with only 50 per cent of British industry estimated as being aware of the devices, and only 2 per cent of that 50 per cent actually applying them.

The potential of this government promotional effort could have been greatly enhanced if a report such as this, coming at this time, had shown British and European industry (as micro-

computer users) the potential returns on an investment in micro applications.

For, as Robson said last week, "user opportunities in the UK are now enormous, there is a tremendous opportunity to create new products and new jobs." He reiterated the oft-quoted opinion that many more jobs would be lost by not developing micro applications in the UK, through competition from other countries that did, than would be lost by "job replacement" by automation.

The figures the Pactel report presents to the semiconductor industry about the European market are nonetheless interesting.

The report predicts a big jump in microcomputer sales in 1980 as products currently in development reach production volumes. The 1977 "consumption" was \$19 million, while 1981 will see it rise to over \$297 million. The 1986 market estimate is \$832 million. These figures are, however, at fixed 1977 prices, so account has to be taken of the continuing downward price trend in microelectronics.

The 1986 figure takes into account the application of devices that have yet to be deve-

Two Mbit RAMs planned in \$200m programme

A \$200 MILLION, six-year development programme is being planned by the US Department of Defence. It is seeking to produce two Megabit RAMs, bipolar circuits with 30,000 gates to a chip and a 200Mbit clock rate, and NMOS circuits with 150,000 gates and 30Mbit clock rates.

Although the full budget has still to be approved, some \$18 million has already been committed to the programme for next year.

The aim is to develop a new generation of Very High Speed Integration (VHSI) semicon-

ductors for military applications. They could be 100 times faster than current devices.

All of the three main services of the US armed forces will be participating in the programme.

So far, the US Navy has been given responsibility for developing electron-beam lithography, with the intention of getting line widths down to 1.25 microns, initially. The ultimate goal is to attain sub-micron line widths geometries. It is hoped that such a high density device will be available within three years.

Add-on peripherals expand the Commodore Pet

THREE more manufacturers are jumping on the Commodore Pet bandwagon by introducing add-on peripherals and systems that greatly expand the capabilities of the machine. The add-ons provide a main memory extension, a floppy disc system and a low-cost, business quality "IBM" printer.

Perhaps the most unusual of the three is the floppy disc system, from Midland Microelectronics of Solihull. Its MM3 system provides a data transfer rate between the Pet and the storage medium that is claimed to be 1,000 times faster than the machine's internal cassette equipment.

A twin mini-floppy disc system, it is housed in a "saddle" casing that fits over the top of the Pet display screen housing, so that there is one drive mounted on either side of the screen. A stand-alone single disc system is also available.

Both come supplied with a

PROM containing the disc operating system.

The "IBM" printer comes from Pet distributor GR Electronics. Based on the IBM 3862 Golfball unit, it provides a full ASCII character set and has the standard golfball feature of interchangeable typefaces.

Called the Petprint 3862, it has a print speed of 15 characters per second and a line length of 130 characters. It is driven from the Pet user port rather than the IEEE standard interface and requires a less than 256 byte operating program, which is available on cassette.

Last but not least among the add-ons is the Petite, from Plessey Microsystems. This is a self-contained RAM module that expands the Pet's main memory capacity from between 8K bytes and 32K bytes. It interfaces with the Pet memory port.

The standard version, which has a current price tag of £449, is a 24K byte unit.

Edited by Martin Banks

Plan to aid the disabled

THE Seagraves of Rulip are pictured outside the offices of hobby computer magazine Practical Computing, with their prize of an Apple II computer. Seated there is Mike Seagraves, Apple distributor of Personal Computers, which sponsored the magazine's recent competition on the best ways to use a small computer.

The Seagraves' winning entry is a plan to help rehabilitate handicapped people into society. Based on the application on the known usage of two plastic tea-spoons, their plan is to develop a program by which handicapped people can write with the aid of a blow-pipe, joystick or any other kind of switch that can be adapted to suit the degree of handicap.

JSP is the sharper axe

You know the story about the man who had so many trees to cut down that he didn't have time to sharpen his axe?

For program design, JSP is the sharper axe.

- We've got it ready made to hand over to you.
- We can train your staff on site.
- We can provide JSP software to support JSP design.
- We can provide self study courses.
- We can train your best people to be instructors and consultants in JSP.

You should complete the coupon and send it to us today. Unless, that is, you are too busy cutting down trees.

RELATIONAL DATABASES

Relationships between files. The application of relational database techniques both to conventional file design and to database design for a relational database management system frequently leads to the creation of a substantial number of simple files. Conventional files can be related using a cross-index; some relational database management systems provide a similar but more comprehensive feature called joining. The principles of cross-indexing and joining are the same: two files are related using a common data item (or combination of items). This data item is often the key of one of the files and part of a concatenated key in the other file. Here are two examples.

In Part 4, Figure 2, ITEM is the key for File A and part of the key for File C. File A and File C can thus be related on the values of ITEM.

In the school examinations example given in Part 4, the Pupil file is related to the Mark file on PUPIL; the Subject file is related to the Mark file on SUBJECT. There is thus a collection of data which relates Pupil and Subject — the Mark records. Such data are called intersection data. If the relationship between two files is n-to-n (eg Pupil to Subject) but no intersection data exist, it is necessary either to create a dummy file which contains only a concatenated key (eg PUPIL, SUBJECT but nothing else), or for the database management system to provide multiple value fields. The provision of such fields allows the database management system to support n-to-n relationships directly without the need for empty logical children (IMS) or dummy intersection record types (IDMS, IDS, SIBAS and other Codd-style systems). Adabas, for example, provides full support (including indexing and file joining) for multiple value fields.

Multiple value fields may or may not be necessary for file joining.

1-to-1 relationships. If the data items used for joining the two files are related 1-to-1, neither item will have a multiple value.

1-to-n and n-to-1 relationships. In Figures 3 and 4, one chief has many Indians but each Indian has only one chief. The relationship diagram is:

Figure 3

In Figure 3, the two files are joined on #indian, where each value is unique to a particular Indian. This entails having a multiple value data item of #indian in the chiefs' file.

In Figure 4, the two files are joined on #chief, where each value is unique to a particular chief; no multiple value occurs. In a 1-to-n or n-to-1 relationship, the joining data item should normally be a key for records on the "1" side rather than the "n" side. This means that the data item also appears in records on the "n" side but not as a key (as defined in Part 2).

Note that a file which has records with a multiple value key cannot be in fourth normal form unless one of the values (eg the

Part 6 of a series by Max Stewart, divisional technical support manager, Leyland Vehicles

first in each record) or a concatenation of all the values is designated the prime key.

n-to-n relationships. If the key data items are in an n-to-n relationship, the common data item will normally have a multiple value in one file or the other.

An example is given in Figure 5. If a number of pupils sit a particular examination, and any one pupil can sit several examinations, the pupil and examination files can be joined on either #pupil (where each value is unique to a particular pupil) or #exam (where each value is unique to a particular examination). The relationship diagram is:

Figure 5

If the files are joined on #pupil (Figure 6), each examination record should contain (in addition to #exam) a multiple value of #pupil with one value for each pupil who sits that examination. If, instead, the files are joined on #exam (Figure 8) each pupil record should contain (in addition to #pupil) a multiple value field of #exam with one value for each examination taken by that pupil.

Note that even with this n-to-n relationship it is not mandatory to use a multiple value joining data item in one file or the other, and there are cases where a multiple value cannot be used. If any one examination could be entered by a larger number of pupils than any multiple value field implementation limit, the examination file can be decomposed into two files (Figure 7): a relationship file with one record for each #exam #pupil combination (i.e. dummy intersection data); and a details file for each examination.

If the examination details were short, the details could be repeated in each relationship record, and the examination details file dispensed with. Such a file is far removed from fourth normal form — it would actually be in first normal form only.

Other Mechanisms. Other relational database management systems determine the relationship between records in two files dynamically (when a query is posed for example). This often entails a serial search through one of the files. If a record in File A is selected using some search criterion, the related record or records in File B will be found by searching file B.

Summary. This part and Part 5 have covered the implementation of PNF files in a conventional file handling system and in relational database management systems. The next article will discuss implementation in hierarchical and Codd-style systems.

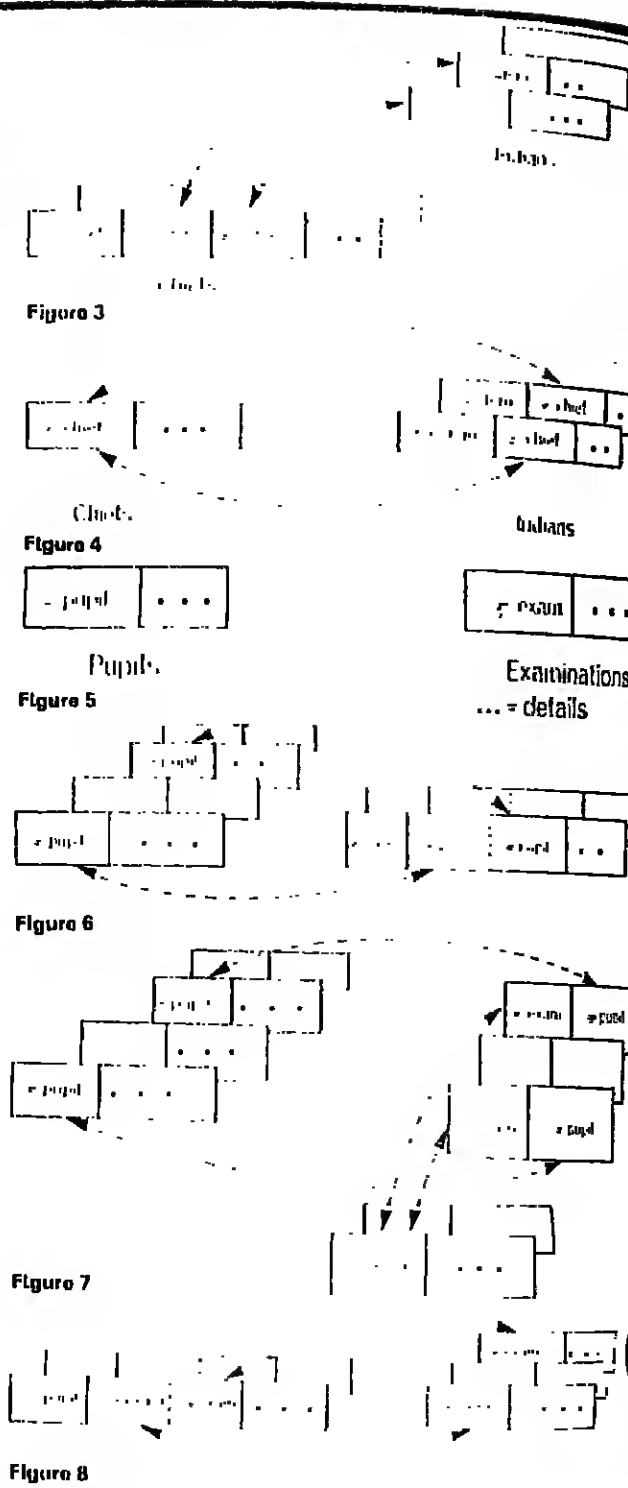

Figure 8

EDUCATION AND TRAINING

'There's not enough of it about!

Students on a BOC Datasolve training course look at a closed-circuit TV recording of one of their own tutorials.

If the title of this article has intrigued you sufficiently to read this far, let me say straight away that if you're not getting your share, it's probably your own fault.

What I'm referring to is, of course, your share of the skilled computer man and woman-power you need to ensure successful computing development within your organisation.

The purpose of this article is to encourage you to do something about it, by exposing other people's good ideas to see if they could help you.

Firstly, let's get to grips with the national scene if we can. I make no apologies for not beginning with statistics. As Disraeli said: "There are lies, damned lies and statistics" and this more or less reflects the current state of ignorance.

There are, however, two national schemes contributing to the supply of well trained junior computer staff. These are Threshold and Tops, both sponsored by the Manpower Services Commission.

The Threshold scheme is mainly intended for school-leavers and all students must be over 16 and not yet 20. They must also be unemployed or in a non-career job. The scheme is administered by the National Computing Centre.

Threshold courses are 40 weeks long, run by further education colleges and include 24 weeks of work experience in industry where the student's work is guided by college tutors and his work supervisor.

How successful has this scheme been?

Success, of course, depends on what you want to measure. What was the scheme supposed to deliver?

I believe that it was two things: firstly to train people who would otherwise be without useful skills and therefore with little or no prospect of building a fulfilled life for themselves.

Secondly, to provide

jobs in operations or programming.

Forty weeks on Threshold, however, seem to make a world of difference and 80% of all the students get jobs within three months of completing their course.

This year just over 500 students will be taking this kind of course at a cost per student of about £1,500. Next year it is hoped that 1,000 student places will be made available.

Now, the other national scheme — and equally successful, too — is Tops.

This year 90,000 people will take some sort of retraining course sponsored by Tops. Just over 2,000 of these will be systems, programming, operations and computer engineering courses.

Table 1 shows how this total is made up. Tops courses are run by colleges and by industrial and commercial organisations — including my own.

Other organisations running Tops computer courses have a similar view.

Our own course is, I believe, typical. It is 15 weeks long including a five week industrial experience segment and concentrates exclusively on Ansl Cobol for IBM installations.

All students design, code, test and prove a case study program before going to employers for their five weeks and many are recruited by the organisations

already have is obviously important. (I also take it to include getting the people you want to keep.) Getting your selection practices right is not difficult; it just takes time and determination.

Too often one supervisor carries out one interview and recruits an applicant. It might pay dividends to let three people — supervisor, manager and personnel officer — see the applicant, and the applicant.

Additionally, if you have a team of specialists who must work as a team perhaps the applicant should meet the team. It's easy in training, all applicants take a test class with existing tutors in the audience. It may not be so easy in other disciplines.

Once you have caught your programmer you need to keep him. Why does he like you and want to stay? What turns him on?

According to an article in the US magazine, Datamation, programmers in the US are motivated by technical achievement, interest in the work itself and the guidance and counselling they get from their supervisors.

They are not turned on by job security, working conditions or company policy.

I imagine that few installations can provide a constant flow of ego-fulfilling work for all their staff. Good supervision is therefore important and job enrichment practices a legitimate way of retaining the staff you employ.

"To achieve and be recognised is not the same as having your achievement recognised" — thoughts of Chairman Hartzberg. Staff who achieve deadlines, targets and high quality performance need to have that achievement recognised by their peers and by their supervisors.

Productivity tends to be a dirty word these days but provides another alternative to searching for more staff and implies that we make better use of what we've got.

There are many program development aids which are expensive to use but cost effective in terms of their achievement.

How can you get more of your share? Use the national schemes. Help attract more people into the business. The only solution lies in recruiting untrained people and training them ourselves.

The key to the future impact of information technology on society will be the capability of the educational and training system to provide sufficient numbers of people with the skills to use the technology effectively and to create a wider and more informed public awareness of the true potential — and dangers — of that technology.

This supplement on education and training examines some of the practical work currently being implemented to help create the necessary technical, managerial and user resources.

The introductory article on this page examines one of the most urgent requirements — the need to produce an adequate supply of computing person-power. Don Yeates, Education Council/Technical Education Council committee, pictured above, left

head of education at BOC Datasolve and former head of systems and programming and schools education for the National Computing Centre, suggests some ways of tackling this problem. Yeates has served on a number of national bodies concerned with computer education and training, including the joint Business Education Council/Technical Education Council committee.

employers with useful junior computer staff who would not otherwise have been available. Judged by these two criteria, the scheme has worked well.

Average Threshold students have perhaps an "O" level or two, but are more likely to have two or three CSEs and only very rarely an "A" level. They are therefore, apparently, almost inevitably barred from

The courses are held in most regions of the UK with the exception of the South West — come on Plymouth, Exeter, Swindon and Bristol! If you are in a college and would like to run a Threshold course or if you are an employer who needs staff, contact George Penney at the NCC on 061-228 6333. As they say on the phone-in programmes — "the lines are open

Readers of Bernard Allen's column (CW, November 2) will be familiar with the operations course run at Brahamwood College and aware of the success of this type of training for operators.

The success we have had with our own programmers' course makes it quite clear that Tops programmers are in high demand as well, and I'm sure that

which have tried them out in this way. Most students, therefore, have a job to go to before the course is over.

So much for the national scene. What can private industry do? There are three key words which sum up the action we should all be taking. These are, "attract", "keep" and "develop".

We need to attract more people into our business. This means convincing school, college and university leavers that a career in DP is a good thing to follow.

The CSA, as befits a trade organisation, is already working with careers advisors at university to encourage graduates in non-computing subjects to consider a career in computing or to take a conversion course at post graduate level.

Individual organisations can, I believe, do much more at a local level to establish good relations with schools and colleges and to provide practical encouragement to people studying computing.

Keeping the people you

THE STORY BEHIND THE NEW RADIO WAVELENGTHS

On the 23rd of November many familiar radio programmes will be found at new positions on the tuning dials of our receivers. What are the technical reasons behind the changes? And why did the BBC choose the particular new wavelengths for Radios 1, 2, 3 and 4? The November Wireless World brings you the whole story — plus useful tables listing the new wavelengths of all the UK radio stations involved.

Also in this issue: constructing a noise reducer for tape recording; an unusual design of electronic burglar alarm; a survey of laboratory "breadboards".

EDUCATION AND TRAINING

The importance of educating a wide range of people in the development and use of computers poses a major challenge to the teachers as well as to the taught and the teaching methodology used is of fundamental importance.

In this article, which focuses on some of the teaching techniques used at ICL, CONWAY BERNERS-LEE, based at ICL's headquarters, who has been in the com-

puter industry since 1953, describes how one such technique proved to be of great value to him when he had to learn about a new product very quickly.

Barners-Lee has written a number of articles popularising Operational Research applications and in recent years has been using these techniques on performance evaluation work.

As part of its training programme ICL uses 1500 Series systems to assist students. Here, the student is reading how to load the 1500 with a cassette which will take her through the machine's assembly language in outline. ICL estimates that a student should be able to write, assemble and test a small program using this method by lunchtime.

Learning the right way—step by step

SUPPOSE you are the boss. Your computer department sticks out like a sore thumb—it produces too little and too late. It does not understand you or identify with your business or policies. It is very mysterious and maybe it is best left alone since after all there are many other pressing problems. However, sooner or later the nettle must be grasped.

But how? It's no good talking to the experts and as for the salesman, his interest is in selling you more kit.

What you need to do is to consult with your peers in other organisations—people bearing equally heavy responsibilities and faced with similar problems, albeit in a different context.

It would, however, help to have someone from the manufacturer who also operates at your level of responsibility.

What is needed is a carefully and sensitively structured meeting lasting long enough for the problems to be adequately examined and conclusions reached. In such a meeting all the participants expect to learn.

ICL has been doing this regularly at Heddon Park for some time now and certain conclusions emerge. A fundamental rule is that there must be no jargon. If there is, the ICL director (no less) must insist on an

adequate translation.

Early on there will be a very small programming example—just large enough to make the point that clear specifications are the essence of good project management.

What can emerge from two days of working in this way as a group is a confident realisation that though computer departments are peculiar, they are no more so than other specialised departments, and they can be managed in basically the same way by setting clear objectives together with realistic milestones regularly monitored.

This type of educational activity is intensely demanding. The director leading it must be supported by staff who are themselves candidates for major responsibility at some stage in their careers. It is very expensive for all concerned—but very worthwhile.

Suppose, on the other hand, that you are in a somewhat different position. This time you are a specialist with a need to know as much as possible as quickly as possible.

It so happens that I found myself involved with evaluating the performance of point of sale systems and I needed to get to know the ICL 1500 processor in detail very quickly.

I was at Beaumont at the time and expected to read it up

in the library there. Instead, I was shown into the 1500 suite with 1500s and some binders like the one in the photograph.

The binder contains a text, an audio cassette and also a 1500 cassette. All three are used in conjunction. After being guided through the introductory material the student is taught how to switch on the 1500 and load the cassette.

A teaching programme then uses the small screen on the 1500 to introduce the machine to him in the point where he can run a job.

As a reward he is allowed to play a few games, but he soon gets curious about the next binder. This takes him through the assembly language in outline—just enough to enable him to write, assemble and test a small programme before lunchtime.

This is not just a technical achievement: the technology is trivial. It is a teaching achievement—the work of people who have an exceedingly competent understanding of the human learning process.

For instance it is a great thing if you can get the learner right to the end of something right at the beginning because that gives him the feeling that the whole learning task is manageable. At the ICL customer cen-

tre, one group of students can watch a previous group's efforts in detail before doing it themselves. Teachers are also encouraged to criticise their own performance from a TV recording of the lesson.

In this connection, however, it should be noted that the availability of sophisticated teaching equipment and procedures is placing the teacher in a more tutorial and less theatrical role.

At the same time, the students themselves are playing a much more active part.

Training is so important that it is too important to be left solely to training establishments, so small training departments are to be found throughout ICL. It has been found that it is very helpful to the people concerned to plan and undertake training needs.

The annual appraisals of staff provide feedback on the training needs of individuals in relation to their present and future careers. At ICL, Bracknell, the training department ensures that people are kept abreast of developments inside and outside the company through weekly voluntary lunch time presentations with a wide range of topics.

These include overviews of the design of particular items of hardware or software and also reviews of subjects of much wider interest such as views on machine intelligence.

"Do it yourself" is a good motto for all learning and, as an exception, an occasional well-attended Bracknell lunch time session features the work of the ICL computer section of the Bracknell recreation club—a spare time activity encouraged by ICL, which has produced a number of very professional microprocessor projects.

The lessons about learning which ICL has itself had to learn have been forced on the company by the sheer scale of the problem and the absolute necessity to resolve it as efficiently as possible.

This can be gauged from the fact that in the UK alone ICL provides every year 35,000 student weeks for training its customers and its own staff, together with a great many packaged courses for use around the world.

Middlesex Polytechnic

Part-time Courses in Computing

Apply now to start next September

- Higher National Certificate in Computer Studies
Two years part-time, one full day a week at Hendon
- Higher National Certificate in Mathematics, Statistics and Computing
Two years part-time, one full day a week at Enfield

These qualifications are important steps in a career in computing, and can also lead to study at higher level. For example the HNC in Mathematics, Statistics and Computing is a recognised qualification for the Polytechnic's BSc and BSc Honours in Mathematics for Business course, and the HNC in Computer Studies allows entry on to the Polytechnic's BSc Part 1 course.

Please write for further details to: The Admissions Office (Set. C.220), Middlesex Polytechnic, 114 Chase Side, London N14 6PN. Telephone: 01-553 1074/5.

UNIVERSITY OF SOUTHAMPTON EXPERIMENTAL OFFICER (COMPUTING)

There is a vacancy in the University Computing Service for an Experimental Officer to provide development and maintenance support for computing and communications equipment.

The post will require detailed involvement with equipment performance, and maintenance and repair procedures for a wide range of computing and communications hardware. Also design and development of equipment to meet specific requirements. The successful applicant will have considerable experience of electronics and digital systems, in-

cluding the use of assembly language programming. Experience of communications systems would be an advantage. Minimum qualifications degree or equivalent. Salary in the range £3394-£5604 per annum according to qualifications and experience. Applications, giving date of birth, details of qualifications and experience and the names and addresses of three referees should be sent to: C. N. Bass, The University, Southampton SO9 5NH quoting reference number 800/S/CW.

The Management Systems Training Council was established to record, disseminate and teach the best practices in the areas of business organisation and systems, and it has been doing this for the last 21 years.

MSTC

Amongst our range of standard courses are included:
COMPUTER SYSTEMS ANALYSTS
COMPUTER SYSTEMS DESIGN
PROJECT MANAGEMENT
MINI-COMPUTER SYSTEMS
EFFECTIVE PRESENTATION

WHAT DO WE OFFER?

Free-standing modular courses which allow companies to select those aspects most appropriate to the career development of an individual.

We also run in-house courses tailored to suit individual needs of companies.

MYRIAD Analyst Programmers & Systems Engineers

Engineering Components Limited is a leading group of Companies in the automotive component industry. It is comprised of several subsidiaries, both in the U.K. and Overseas. Continual expansion has resulted from successful business performance over a long period. The group is itself part of Turner and Newall Limited — a major world-wide organisation with interests in Engineering, Plastics, Construction and Automotive Industries. The company is well sited at Slough in Berkshire, within easy commuting distance of pleasant rural areas as well as being close to London.

Over a number of years the Company has developed a broad range of successful computer systems which are now running on its local ICL installation. Following a group decision to centralise computer hardware, an IBM 370/158, running under MVS, computer has been installed at Group Headquarters and is replacing the on-site machine. To fully exploit the potential of this new machine and to meet the system requirements of our business well into the 80s we are now engaged upon the development of an exciting new generation of systems. The systems, which will embrace Sales, Manufacturing and Financial spheres of the Company's operation, will utilise advanced database and Real-time techniques.

Sales Order Processing

The team working on this new IMS DB/DC Real-time Database System currently involved in preliminary system design work for the Slough division of the company. The project has recently been expanded to cover a further division based in Wales and Hemel Hempstead, and the associated preliminary systems investigation and design work will begin shortly. Detailed systems design work will commence before the end of 1978 and continue through 1979.

Additional enthusiastic Analysts/Programmers are needed to become involved at all levels of design, programming, using training and implementation.

Manufacturing Systems

In order to react more quickly to variations in customer demand, a fully integrated Manufacturing System is currently being developed to include Inventory Control, Accounting, Material Requirements and Capacity Planning, and Demand Planning to provide an interface with the Sales Order Processing system. These systems will be supported by IMS Database covering Bills of Materials, Routing and Manufacturing/Purchase Orders. This significant development represents a complete revision of our Production Control System and consequently provides a valuable opportunity to join a team controlling and implementing a major reorganisation. We require, Senior Analysts/Programmers to assist with the design and implementation of these application systems. They will be working closely with users in developing operational procedures and interfaces within the departments covered by the new systems.

Database Administration

We are newly established centralised function with three main responsibilities — database development, application project team support and IMS technical functions. Database development involves long and short term planning, design (including security and integrity of data) and implementation of database together with the control of access to data and the co-ordination of action to implement changes. Application Project Team Support includes initial consultancy on the approach to be used in a database environment, optimisation of database, coll sequence (including modelling with DB Prototype) and assistance with IMS problems in testing, IMS technical functions cover a wide range of activities such as recovery and restart procedures, performance monitoring, reorganisation, unload/reload, IMS support, etc.

Finished Goods Inventory Control

A Finished Goods Inventory Control System is being developed interfacing with the Manufacturing and Sales Order Processing Systems, to meet the needs of this unit company. The system will encompass all on-hand inventory, controlled including Stock Recording, Forecasting, Replenishment Planning, Forecast Inventory and Stock Analysis. This complex and sophisticated system, utilising database and providing extensive facilities, using a Ferranti mini-computer linked to the accounts in Manchester, is scheduled for completion towards the end of the year. We are now engaged upon the preliminary system design and implementation. We require, Senior Analysts/Programmers to participate in the detailed design, programming and implementation phases.

Financial Systems

The Project Team is responsible for the design and implementation of Integrated Accounting Systems, which will interface with Sales Order Processing and Manufacturing Systems. A project currently being worked on and used Assets include the month-end and a comprehensive Management Sales and Demand Control System due late early next year. Other systems, at the earlier stages of planning and design include General Ledger, Purchase Ledger, Payroll and Sales Ledger. These systems will use IMS DB/DC database and require real time techniques, and are to be implemented towards the end of 1979.

The Company offers an interesting technical environment, developing programs on-line using DB/DC software. Applicants should have a mature outlook and be keen to accept responsibility; the emphasis being on the ability to join and develop as members of a Project Team, rather than specific technical experience.

Five weeks' holiday, a subsidised staff restaurant, relocation expenses (if necessary), and an excellent starting salary make these positions extremely attractive. If you are interested in discussing your suitability, contact our Recruitment Consultant.

TURNER
& NEWALL
LIMITED

JBA

Systems Consultants

London

up to £8,000

Our client, one of the largest software houses in Europe, has opportunities for professional staff to join an expanding consultancy team. The work includes advising clients on systems development, design and implementation of medium to large application and project management. Candidates should have at least five years experience in the design of commercial applications particularly where real-time or database techniques have been used. A proven background of project leadership is obviously an advantage.

Salary negotiable according to experience. Excellent career prospects. Relocation assistance available. Contact: Jim Baker

Systems Programmer

Mid Bedfordshire

to £7,500

An experienced Systems Programmer is invited to strengthen the systems programming team in this technically stimulating environment. The appointee should ideally have at least three years experience of DOS/Vsand would be required to support CICS and other related software. In addition to performing a support role, the software group undertake major control software extensions and modifications to provide the advanced facilities and performance essential for maintaining a high quality service to users. Excellent salaries and training facilities. Contact: Margaret Stevens

Senior Consultant - Sales

Herts

to £7,000 + car & bonus

A highly successful mini computer manufacturer seeks to appoint a senior member of the team responsible for large systems sales. Candidates will be able to demonstrate previous experience of project control, probably in a post sales support role; have the ability to identify customer requirements; co-ordinate resources, and deal positively with clients. Proposal writing and presentations are both considered important while an understanding of Distributed Processing, DBMS applications and experience on large miniframe machines would be a distinct advantage.

The appointment offers a real challenge and is supported by excellent conditions which include generous assistance with relocation. Contact: Margaret Stevens

For further information on any of the above vacancies please contact the appropriate consultant. If your qualifications do not match the above positions but you are seeking other opportunities please contact us anyway.

JAMES BAKER ASSOCIATES, International Personnel Consultants
16 Maddox Street, London W.1. Tel: 01-491 4478

Junior Systems Consultant

Berks/Europe/USA

Start c £6,500 + BUPA

An opportunity for an Analyst or Analyst/Programmer has arisen to join the European Project Consultancy team of this major American company. The successful candidate will help provide support and advice on commercial projects of all kinds to installations throughout the UK and Europe, so applicants must therefore have a good commercial grounding - preferably with a strong IBM bias.

Internal promotions occur on a regular basis, often to senior positions in the USA - indicating that career prospects are wide open for able candidates. An ideal opportunity to gain Project Management experience at Consultancy level. Travel to the USA and Europe, supported by generous tax-free allowances, will play a major part of the job. Contact: Andy Wright

Hardware Design Engineers

North Surrey

£4,500 - £8,000

This company is a subsidiary of an extremely large engineering consultancy group, specialising in producing individually tailored industrial systems, usually based on either PDP 11 minis or INTEL micros. Successful candidates can have a career leading to Chief Engineer and above - your capabilities and drive will be well rewarded.

Applicants should have at least one years design experience - preferably with micros or minis. If you can back it with an Engineering or Electronics degree and/or experience of software design, this would be extremely useful. The tremendous growth of the company in this field ensures total involvement with the latest techniques and applications. Contact: Andy Wright

Assembler Programmers to train on DEC mini's

Central London

c £6,500

Our client, a large and diverse manufacturing organisation has vacancies for experienced ASSEMBLER programmers. On completion of initial training the successful candidates will join a small team to develop and maintain the mini-line software. The installation comprises an IBM 370 and a network of PDP 11/70s, previous experience of these systems would be a distinct advantage.

A superb opportunity to be retrained on DEC mini's. Contact: Margaret Stevens

**INFORMAL
INTERVIEWS**

Wessex Regional Health Authority

Senior Computer Operators

Applications are invited from experienced computer operators to work on a busy ICL 1903T computer installation based at the computer centre, Winnell, Winchester. The machine is currently run on a 2-shift basis using the George 3 operating system, providing a service to all the Health Authorities in the Region.

Salary is in the region of £3452-£4421 plus 10% shift allowance, 18 days' annual leave plus statutory holidays. A canteen and sports and social club facilities are available.

Closing date 18th December, 1978.

Job description and application forms available from the Personnel Department, Highcroft, Romsey Road, Winchester, Tel: Winchester 03511, Ext. 329.

COMPUTER SYSTEMS DEVELOPMENT

Staff with mechanical or engineering background are required to join a development team working in the field of computer systems design and work scheduling. The programming language principally used is Fortran, but experience with other languages would be an advantage.

The work is interesting and varied and involves close liaison with industry in the application of advanced principles of production systems design and operation.

Good commencing salary and conditions of employment; relocation expenses whilst appropriate.

For more full details in Manager, Production Technology, Systems Development, P&A, Walton, Macclesfield, Cheshire SK10 3QD, Tel: Macclesfield 4133.

NEWPORT BOROUGH COUNCIL

Borough Treasurer's Department

ANALYST/ PROGRAMMER

AP3/4 (£3732 - £4832 p.a. inc.)

Applicants should have at least 2 years' PLAN and/or COBOL experience. A knowledge of GEORGE 2, MAXIMOP, and systems work would be an advantage. The Borough operates an ICL 1902T computer with local and RJE terminals.

Assistance with removal expenses and temporary housing available in appropriate circumstances.

Application forms are available from Personnel Section, Civic Centre, Newport, Gwent NP23 4NR (Tel: Newport 55481 Ext. 3148) to be returned by Thursday, 7 December, 1978.

NEW YEAR NEW JOB!

OFFICES: AMSTERDAM, PARIS, MANCHESTER, BIRMINGHAM

Office 1.1.14

We have some positions to fill

Our client's team is already strong, but they are looking for additional SENIOR SYSTEMS ANALYSTS to meet the challenge of a demanding development programme.

It's the chance to join the computing division of a diversified group which has recently moved to a new data centre in an area of Southern England with easy access to the coast and London, and with a range of realistically priced housing. The centre is equipped with several mainframes and minis, supporting advanced on-line systems.

You could work in a major project team, designing and implementing on-line production control systems, or as an individual, working on comprehensive RT mini-based accounting systems.

Verity of applications, and advanced hardware and software, provide excellent opportunities to develop your skills and experience. At the same time, you will enjoy a stimulating working environment in excellent surroundings.

Career prospects are exceptional. The division plans to grow rapidly and you will have the opportunity to influence the way in which it develops. Promotion to project leader and beyond is normally from within.

You need to have good quality systems experience, preferably in a manufacturing environment. Length of experience is less important than general ability and the right approach to systems problems.

The rewards are a salary up to £8,000 a year, plus generous relocation expenses.

So, if you'd like to join the team, contact Neville John on 01-242 9356 (day) or Farnborough, Kent 52880 (evenings and weekends). Alternatively, write with details of your experience to the address below. Interviews can be arranged at our offices or at the data centre. These vacancies are open to men and women.

OCC Computer Personnel Limited,
16, Bedford Row,
London, WC1R 4EB

ANALYST/PROGRAMMERS to £7,200 (HAMPSHIRE)

The opportunity exists to join a fast-growing, hard-working group of young professionals specialising in providing data processing services to the insurance industry.

The people we hope will join us should have:

- experience in RPG11 or COBOL, preferably with some knowledge of small business machines and/or insurance applications.
- a willingness to travel and undertake individual responsibility, together with a good team spirit and an adaptable personality.

In return the company offers a professional yet informal working environment with flexible hours of work, pension scheme, bonus scheme and generous removal expenses.

061-873 7875 (evening)

KENT COUNTY COUNCIL

TREASURER'S DEPARTMENT Computer Operators

to £4334 plus computer service premium payable over a 3 year period.

The County Council currently operates two IBM 360 computers but these will be replaced by two IBM 3081 computers in January 1979 and a 2078 in the following year. The computers are used for 24 hours per day, 6 days a week and the shifts rotate on a weekly cycle. Computer operators work in one of the operating shifts. Previous experience is essential.

The Computer Unit is based in rural Kent in the village of West Malling. Benefits include generous holidays and a good pension scheme. Housing accommodation may be available. Salary shown includes supplement and 13th month pay.

For an application form and details of the post, please contact: Mr. J. H. Smith, Personnel Officer, 13th December, from the Administration Department, Kent County Council, West Malling, Kent ME14 2JL. Phone 0464 84111.

Our client, a leading British Company in the leisure industry, with an outstanding record of growth - both turnover and profit - wishes to recruit both analyst/programmers and programmers.

The installation will be a brand new large DEC configuration to be installed in the Spring of 1979, and therefore these are really ground-floor opportunities which will guarantee successful candidates a stimulating job where the work is all on new systems development.

Technically, most of the major systems will operate in an interactive mode and thus afford the opportunity to get away from working on routine batch systems. There will be some batch work of course, but the emphasis is on real-time and telecommunications work.

Working conditions are first class and the company benefits meaningful. Salary will be based only on the qualifications, experience and potential of the successful candidates. There is also a significant bonus scheme related to the individuals own measurable performance.

Candidates without DEC experience will be provided with full training.

To apply or obtain more information write or telephone to the London Office quoting reference number c/78099.

Replies will be forwarded direct to our client and therefore applicants should indicate in a covering letter any companies to whom they do not wish their applications to be submitted.

SPECIALIST RECRUITMENT CONSULTANTS

THE MICRO REVOLUTION

We have been retained by a major force in microprocessor-based systems development, to recruit talented D.P. professionals to help them along the road to an extremely bright future.

The Company is a dynamic, independent operation forming part of a very large international concern. Together with their distributors and associates in America, Australia and most European countries they develop, manufacture and market a growing range of micro-based systems. There are opportunities in the following areas:

SOFTWARE DESIGN C. £7,000 + BENEFITS

You will work on the development of generalised packages which will be tailored to customer requirements. Powerful interactive facilities are provided by a DEC PDP 11 based system and current target hardware products utilise RCA 1802 and INTEL 8080 micros. The task of developing efficient, parameter driven software is highly demanding and the posts offer scope for innovators with good all-round mini-assembler experience. Key development areas include:—

- Microexecutive Software (code interpreters/IO Drivers)
- Communications (variety of standard protocols)
- Product Packages (growing range of data-capture applications)
- Development System (software/hardware tools to supplement RSX11M)

Ref: SIR 1033

ENGINEERING COMMISSIONING AND SERVICE EUROPEAN AND U.K. TRAVEL C. £6,000 + BENEFITS

This key post within the engineering group exceeds the normal responsibilities of a service engineer. The successful applicant will have a broad based engineering background ideally with experience in:—

- Mini / Micro Computer Systems
- Peripheral Equipment
- Communications Systems and Associated Protocols

Additionally to have some exposure to hardware design, whilst not essential, would be advantageous. Having the broad based background will enable the applicant to solve original problems as and when they arise. This demanding job includes direct liaison with senior management and as such leads to high rewards.

YOUR OPPORTUNITY FOR 1979 PROJECT MANAGERS/SYSTEMS ADVISERS — WORLDWIDE TRAVEL

(Base — Home Counties)

SALARY £7,000-£10,000 p.a.

plus generous overseas allowances when working abroad APPLICATION AREAS: BANKING, FINANCIAL, PRODUCTION CONTROL, OIL DISTRIBUTION, COMMUNICATIONS AND MILITARY SYSTEMS

Are you seeking a new challenge working for a major U.K. based company, undertaking assignments in many parts of the world including NIGERIA, HONG KONG, TANZANIA, MEXICO and the MIDDLE EAST? We require to identify quality candidates to fill the roles of Project Manager/Adviser, able to match the following requirements:—

1. Must have a sound D.P. background and acute awareness of the needs of business in solving day-to-day problems utilising the D.P. technology now available.
2. You will possess the confidence and ability to work alone as well as in a team environment in designing and installing advanced systems within the application areas quoted above.
3. You will be called upon to undertake short term assignments abroad and must therefore be free to work away from home at regular intervals.
4. Only those people interested in advancing their careers within a very secure organisation and wishing to undertake a more challenging role should apply.

TELEPHONE OR WRITE TO US NOW IN ORDER TO ARRANGE IMMEDIATE INTERVIEWS IN LONDON OR THE SOUTH.

24-HOUR ANSWERING SERVICE

SENIOR COMPUTER OPERATORS (HIGH WYCOMBE)

**TO US,
QUALITY IS A WAY OF LIFE**

Volvo Concessionaires, like the Volvo cars we import, is extremely strong on quality: it's reflected in the success of our organisation, and in the people we employ.

At our Head Office in High Wycombe we're looking for men and women to help us raise our standards even higher. We're currently developing a wide range of computer systems to upgrade our operations in all areas of business. These will cover Purchasing, Distribution, Inventory Management, Accounting, Planning and Marketing. In addition, work is under way to install microcomputer based systems in Volvo dealers throughout the country.

You will be responsible for the running of one of the ICL 2950's communication terminals, and micro computers.

To join you should have had previous mainframe experience, preferably with an ICL 2903/4 or ICL 1900 operating under GEOS/II, and be prepared to work on a 5 day, 2 or 3 shift basis.

We're offering salaries of around £4500 pa and a first-class range of benefits, including 4 weeks holiday, non-contributory pension and sickness scheme, plus car purchase discounts. Assistance with relocation will be provided where necessary.

Please write or phone for an application form to: Mr. S. McAllister, Divisional Personnel Manager, Volvo Concessionaires Ltd., Lancaster Road, Cressat Industrial Estate, High Wycombe. Tel: (0494) 33444.

Data Processing Recruitment Consultants

Systems Engineers + Programmers Brussels

Salaries: £13K — £15K

An internationally respected supplier of Data Base and Teleprocessing Management Systems requires Data Processing Professionals for its European Systems Support and Development division having its Headquarters based in Central Brussels.

The company is seeking both English and French speaking Systems Engineers/Programmers up to and including consultant level.

You should have current experience design, development and implementation of any of the following: IMS, CICS, TOTAL, ENVIRON, TASKMASTER, SHADOW, ADABAS or ROSCOE. Candidates with either Banking or Production Control (DBOMP / CAPOSS) exposure are

especially welcome.

Supplemental to a high salary, you will receive extensive benefits including full relocation expenses, life and disability insurance, pension plan and liberal mileage allowances. Those who wish to acquire French language knowledge can expect financial assistance towards the cost of professional lessons. Above all these positive early career prospects with real prospects of working for the other EEC subsidiaries or relocation to the company's U.K. regional office. Interviews will take place within 14 days of the appearance of this advertisement.

U.K. Re-Insurance Group City of London

Salaries: £6K — £9K + mortgage

A major U.K. Insurance and Merchant Bank Group with a recently acquired U.S. based subsidiary with extensive and soon to be upgraded Computer facilities in the City requires additional I.T.P. personnel up to PROJECT MANAGER level.

Ideally you will have around 3 years of continuous PL-1 programming experience under OS and/or MVS and will either have on-line expertise or a desire to move into this area or Data Base design through participation in our clients training programmes.

Of particular importance is the ability to work as a member of a Specialist Project Team under strict documentation and programming standards. A second language - French or COBOL - would, in addition to the considerable advantages of the fulfilment of career aspirations. Our clients offer a low cost, comfortable, private health and non-contributory pension scheme plus excellent restaurant facilities. Interviews will be held at the Company's offices in the City.

Database Project Leader Copenhagen

Salary: c. £14K

We are requested to recruit a Project Leader ideally 27-35 years offering an in-depth knowledge of both Data-Base and Teleprocessing techniques in an IBM environment.

The successful candidate will be required to demonstrate current programming and design exposure in the implementation and support of Data Base and/or Real Time Systems having particular involvement with IBM's own software IMS, CICS, TSO or the products of the independents, namely CINCOM'S TOTAL/ENVIRON;

AT THERESA, STADI, WORLDIA or ADABAS, whilst for those oriented towards DBS 1100 knowledge is essential. Your past experience should have included PL-1 or COBOL programming and design and analysis experience within financial or commercial environment. Supplemental to a high salary you will receive additional benefits including medical or single staff accommodation, full relocation expenses, life and disability allowances.

Real Time Programmers Scandinavia & Spain

Salary: £14K plus benefits

The leading Scandinavian Systems and Turkey Supplier with offices in Scandinavia, Nigeria and California requires FORTRAN and/or ASSEMBLER programmers for its home based and Spanish operations. Whilst the applications under development are sophisticated Real-Time projects previous experience of Real-Time is not absolutely essential but in-depth FORTRAN and ASSEMBLER programming expertise is a pre-requisite. Preference will be given to those candidates who have very

recent or current experience on UNIVAC 4900, UNIVAC 1100 series or IBM 370. Willingness to relocate to Scandinavia or Spain for an extended period is absolutely essential and to assist you in your removal our client will meet relocation expenses in addition to providing initial paid accommodation. Interviews will be held at our London offices from December and others will be made early in the New Year.

Micro Processor Specialists Rural Thames Valley

Salary: £6.5K — £8.5K

A small but rapidly expanding Micro based Systems supplier has very recently established new Headquarters in rural Oxfordshire.

The company is now seeking several Micro or Mini Computer Specialists with 12 months or more practical applications or software development/ factoring or software systems house environment. If you have relevant experience we invite you to discuss your career advancement prospects with our Clients at your earliest convenience in an

informal atmosphere. Those who have Assembler or Basic language experience on Mini or Micro hardware particularly DEC PDP 11, DEC Nova/Eclipse and T.I. 990/990 or Micro-Processors preferably Zilog Z80, Intel 8085 or Motorola M6800 will be ideally suited. In addition to above market starting salaries our client offers excellent career advancement prospects and the opportunity to travel both within U.K. and Western Europe.

PROGRAMMERS

WATFORD

£4,000-£7,000

Our client has several vacancies for proficient COBOL programmers who now wish to advance their careers in a technically stimulating and progressive environment. If you can offer a minimum of one year's programming experience gained on commercial applications and can display the drive and enthusiasm required to contribute effectively, the time involved in discussing your future with us could prove extremely rewarding. They are planning projects to commence early in the New Year and require professionals who can establish themselves quickly and play a major role in the development of these new systems.

Situated in a very accessible part of South Hants/Bedfordshire, these are excellent opportunities and easily commutable from North London, Middlesex and Buckinghamshire.

Ref. NI/3011

DISTRIBUTED PROCESSING ANALYSTS

MIDDLESEX

c.£6,250

Distributed Processing using mini computers with stand-alone capability and links to a central mainframe is becoming the most effective and widely used means of providing D.P. facilities to each profit centre throughout a national company. Our client, is currently seeking enthusiastic SYSTEMS ANALYSTS to play a part in the development of such a system. The successful candidates will be involved in total analysis and design from feasibility study to implementation. They should be able to offer either two years' analysis ability or a programming background with experience in an Analyst/Programmer role. The company offers excellent career advancement potential coupled with all the benefits and aspects from a well-known major organisation.

Ref. SWI/3011

PROGRESS TO ANALYSIS PROGRAMMERS 2-3 YEARS' EXPERIENCE

SURREY/KENT

c.£6,250 INC. BENEFITS

Our client is anxious to recruit PROGRAMMERS with 2-3 years' experience (COBOL and/or ASSEMBLER) to join project teams with the view to future progression to analysis or team leadership.

The company is proud of its employee relations and places great value on internal promotion to the more senior positions. Individual career development is encouraged by a comprehensive training scheme concentrating to begin with on languages, the operating system, data-base and teleprocessing techniques, moving towards systems analysis and project control as one's career progresses.

The installation is based on IBM mainframe under O.S. with all new systems being written in COBOL. The total benefits package can be favourably compared with the best — increasing the basic salary by approximately 20%. Relocation expenses are paid where appropriate.

Ref. SI/3011

ON-LINE FOR 1979 SENIOR PROGRAMMERS

JUST OFF M40/A40

£6,000-£7,000

Our client, well-known in the retail business, is on-line today and has further developments planned for next year. Successful applicants will enjoy working in an IBM 370 mainframe environment where the opportunity to use advanced software and inter-active programming techniques will be of the greatest interest.

Good commercial applications experience together with 3 years' COBOL is desirable and these positions will appeal to those applicants who already lead teams or who wish to evolve into the senior programmer role at the earliest opportunity. The company can offer unrivalled career progression as well as the benefits normally associated with a large company.

SENIOR PROGRAMMERS / PROGRAMMERS

£4,000-£7,000 PLUS BONUS

CENTRAL LONDON

Our client is a diverse company operating worldwide whose interests range from shipping to hotels. In recent years they have experienced remarkable growth and profitability necessitating a deep commitment to advanced computer based systems. At present they operate a large medium-sized mainframe which supports a complex data base and communications facilities. In 1979 the central computer will be significantly enhanced to meet the development workload and permit the introduction of distributed processing techniques.

There is now an immediate need for PROGRAMMERS AND SENIOR PROGRAMMERS with the following profiles:—

SENIOR PROGRAMMERS

should have:

- A minimum of 3 years' programming experience of which a substantial proportion must have been obtained in a Cobol environment.
- Either some supervisory experience or the ability to lead small programming teams.
- An interest in broadening the scope of their technical skills on a very advanced system.
- A really positive attitude tuned to achieving results.
- A genuine desire to remain an active programmer, at least for the time being.

PROGRAMMERS

need to be:

- Either computer science graduates who have since acquired at least 12 months' practical programming experience or alternatively able to offer around 2 years' hard programming background.
- Able to program in a high level language with a preference for Cobol. Retraining will be given in appropriate cases.
- Commercially aware with a sound working knowledge of ANY MAINFRAME OR MINI-COMPUTER.
- Capable of standing on their own two feet working in project teams under pressure to deadlines.
- Wanting to expose themselves to the best professional standards and prepared to make a contribution to their improvement.

ASSISTANCE WITH RELOCATION WILL BE CONSIDERED WHERE APPROPRIATE

PLEASE WRITE OR TELEPHONE US NOW IN ORDER TO MAKE ARRANGEMENTS FOR IMMEDIATE INTERVIEWS TO TAKE PLACE IN LONDON OR THE SOUTH — OR IF MORE CONVENIENT, TELEPHONE JACK COOMBS, OUR MANAGING CONSULTANT BETWEEN 7 P.M. AND 9 P.M. ON (0273) 833120.

01-353 0981

Davy Computing Limited
the petrochemical computer bureau specialists
require

1+1 SALES EXECUTIVES+

for their Trading Division

1 SOFTWARE SALES EXECUTIVE+

The successful candidate for this challenging position will be responsible for all aspects of selling the Company's widely used COMPAID system to the petrochemical, energy and piping industries throughout the world. Considerable overseas travel, therefore, will be almost certainly involved.

1 HARDWARE SALES EXECUTIVE+

In this second important position, the successful applicant will be required to travel extensively throughout the UK expending the sales of the AD/380 interactive graphics system, the demand for which is growing rapidly.

Both these jobs will appeal to people prepared to accept a challenging and exciting way of life. But don't let a lack of knowledge of computers deter you from applying. What we are seeking first and foremost, in each case, is a proven record of selling success plus a solid background of technological experience. We will provide the requisite knowledge of computers during an initial training period. The preferred age range is 26 to 35.

Davy Computing Limited is part of the Davy Corporation - one of Europe's largest groups providing a total engineering and contracting service in the field of heavy capital plant. Both positions advertised command generous remuneration in the form of a good salary plus commission plus company car plus relocation expenses where appropriate plus other normal big-company benefits.

Applications in writing should be addressed to Mrs. E. Bishop, Personnel Officer.

METROPOLITAN BOROUGH OF
Rochdale
Treasury's Department (Computer Section)

SENIOR SYSTEMS ANALYST/PROGRAMMER

RD 2 25,727 / £6,000
(Advert Ref. C 200)

Rochdale is situated 12 miles north of Manchester on the edge of the moorland.

An ICL 2980 system has recently been brought into operation and the machine and staff are housed in purpose designed accommodation in the municipal offices.

The Authority has an ambitious development programme for the next five years. The successful candidate will occupy a vital position in the system and programming team of twelve. First Authority experience would be an advantage.

Assistance with removal and other expenses and holiday arrangements will be available.

Further details of this post may be obtained by writing to: (Advert Ref. C 200)

Application forms and details may be obtained from the Personnel Officer, Rochdale Municipal Offices, 150 Church Street, Rochdale, Lancashire, OL1 1JH.

Applications should be submitted by 12.00 noon on 14th December 1978.

AES WORDPLEX

Who wouldn't like to earn £20,000 plus a car.....next year.

AES WORDPLEX, the most successful company in the largest growth area of today can offer you the opportunity to do just that!

Recent surveys by independent Analysts have conclusively shown that there is **TEN** times the market potential in word processing than in any other data processing area.

As the market leaders AES WORDPLEX supply a complete range of disc based systems from stand-alone to multi terminal with telecommunications facilities.

To cope with the growing demand for their equipment, further sales people are required to expand the sales force **NATIONWIDE**.

Whether you're selling mainframes, minis, key to disk or sophisticated office equipment, we would like to talk to you about earning a good basic salary, with high commission earnings linked to a sensible quota (which 90% of the sales force have exceeded), a company car (lots more fringe benefits) and a company where whether you're an individual or team person you'll be appreciated.

Computer Personnel Consultants

6 MONTHS + RPGII

NEW INSTALLATION

W. LONDON

To £5000

You may be new to the D.P. industry; possibly in your first job and finding that it is not all you expected.

Last month our client installed their first in-house computer; it's successor is on order for delivery next year. They now wish to develop a number of new systems and are therefore able to offer an outstanding opportunity if you have six months, or more, RPGII programming experience.

In such an active environment it is inevitable that heavy demands will be placed upon you. However, this means that your role will always provide interest, variety and, above all, a challenge. As an important member of a small team the end result of your efforts will always be visible as each project is followed through from conception to completion.

If you feel that this type of environment is what you have been looking for, and that you have the necessary determination to succeed then an excellent salary and first class benefits including flexitime, 14 days' four weeks holiday and an interest free season ticket + loan await you.

Hardware Instructors

Around £7000

We are:
● CTL, one of Britain's largest independent computer manufacturers, who are currently embarked on a planned growth programme involving exciting new development prospects which include the successful new 8040 system suitable for small to medium size applications.

We aim:
● to expand our Training Centre, actively looking for new premises and have an opportunity for an additional instructor to join a small integrated professional team.

You will:
● conduct training courses for both customer and company computer system engineers at various levels, including TOPS courses.
● be encouraged to make a significant contribution to the development of both current and new training programmes.

● be given every opportunity to keep abreast of new hardware technology.

You should have:
● good computer systems experience with a proven problem-solving background.

● first class communication skills, and ideally instructing experience, with a strong desire to teach.

We offer:
● salary around £7000.
● excellent benefits package.
● assistance with relocation expenses to the Hemel Hempstead area, where appropriate.
● first class career prospects.

INTERNATIONAL RESEARCH PROJECTS

Civil Engineering
Fluid Mechanics

Applied Mathematics
Computer Science

Physics
Electronics

Including final year students

Many civil engineering projects today are undertaken in or on the world's oceans and rivers. Water may be a hostile but unavoidable medium — as in the rapidly expanding offshore industry; or it may represent a vital resource, as in irrigation schemes, and as the source of novel energy forms.

The more ambitious any of these projects become, the more they have to take into account the natural hydraulic phenomena — wave motion, tidal flows, density currents, sedimentation, coastal processes — which can create problems both in the performance of the installation and in the surrounding environment. Anticipating and solving these problems has for many years been the special concern of the Hydraulics Research Station, which is today a world authority on the subject. It offers its services to consulting and contracting engineers, water and port authorities, industrial concerns and government bodies, both in the UK and overseas.

The Station is expanding and is now seeking additional scientists and engineers who will enjoy a very wide range of project work, good back up research facilities, and opportunities for overseas travel.

HRS is situated on the banks of the River Thames, near Wallingford, Oxfordshire. Candidates (normally aged under 27) must have a good honours degree, or equivalent qualification, in an appropriate subject. Salary will be in the range £7,000-£14,410. Non-contributory pension scheme. Good prospects of promotion.

For further details and an application form (to be returned by 22 December 1978) write to Hydraulics Research Station, Wallingford, Oxon, OX11 8BA. Please quote ref. SA29HC.

GTE General Telephone & Electronics is a major U.S. corporation with a multi-million dollar product-in-hand contract for the realization of a vertically integrated TV, radio, stereo manufacturing complex in Algeria. We seek:

A SENIOR SYSTEMS PROGRAMMER

with 3 to 5 years of experience in a similar job and with knowledge of Honeywell 8000 equipment, COBOL and IDS.

Knowledge of French is an additional asset for this challenging task in a country undergoing rapid expansion and requires total commitment. GTE International is prepared to pay high remuneration to qualified personnel.

Please forward (if possible) resume with handwritten letter photo and debit card salary to:

Mr. Jean Lefebvre, GTE International

11 rue de la Paix, 75001 PARIS

SENIOR SALES EXECUTIVE

MIDLANDS AREA

**Basic Salary £7,000 plus car
On target earnings £12,500**

An established highly successful and ambitious computer services company require an additional Senior Sales Executive to maintain and expand an established Midlands Region.

The company is in the top five of independent service organisations and provides consultancy, systems and programming, bureaux and facilities management services. They require a Senior Sales Executive to cover an established area, who would be given full responsibility for all existing customers and be expected to expand upon the current client base and open up substantial new business.

A sales background in the computer services sector would be ideal, but related experience will be actively considered.

An earnings package with unlimited potential will be established by negotiation, but £15,000 p.a. should be readily achievable.

Company benefits include motor car, free B.U.P.A., contributory pension, expenses payments and four weeks holiday. A good relocation package is available if required.

For immediate discussions, please telephone Mike Hession (021-632 8848). Ref. CW 120.

Analyst

c. £7,000

This new position would suit an experienced programmer seeking to become an analyst, for which we require experience in commercial applications of transaction processing systems on IBM M/16. Knowledge of RPG/1 and PL/1 IBM assembler and fluency in French are desirable. On appointment work will be with an IBM 32.

Please apply to:

Regional Personnel Manager
American Medical (Europe) Ltd.
45 Wimpole Street
London W1M 7DB
Tel. 486 7828/0822

Enhancement of our existing Hardware and further development of application areas has led to the creation of a number of additional posts in the Computer Section.

The application areas will cover the operations and management work of a large multifunctional organisation.

Hardware includes a ICL 1904S, 192K and EDS2000, operating under GEORGE 3. The system supports VDU and more intelligent devices including ICL 7502 and 1500 range, for a mixture of program development and remote job entry. Languages in use include COBOL, FORTRAN, FILETAB and some PLAN.

Systems Project Leader

Salary range £8993-£7506 per annum
Post ref. P.14

to supervise and be responsible for the Systems and Programming Development work performed by the Section and to deputise for the Computer Manager. Proven supervisory ability is essential.

Systems Programmer

Salary range £6133-£5483 per annum
Post ref. P.4

a sound knowledge of the GEORGE III operating system together with PLAN, COBOL or FORTRAN programming experience is required.

Senior Programmer

Salary range £8133-£5483 per annum
Post ref. P.13

Ability and experience of supervising programming work is required, in addition to a sound programming background.

Programmers (3 posts)

Salary range £4638-£4902 per annum
Post ref. P.6

COBOL experience is preferable although appropriate training will be considered for exceptional candidates with other programming experience.

The work involved is both absorbing and challenging and we offer excellent conditions of service including a pension scheme, a flexible scheme based on a 35-hour, 5-day week plus generous sick leave and holiday entitlements. There is also a staff restaurant and an active Social Club.

All posts are open to both male and female applicants. Salaries quoted include pay supplements.

Applications should be submitted on forms available from the Personnel Office, Thames Water, Thames Conservancy Division, Nugent House, Vauxhall Road, Reading RG1 8DB (Tel. Reading 593331). Please quote post reference.

Closing date: 14th December, 1978.

Thames Water

ANALYST/ PROGRAMMER FOR ZAMBIA

A proven analyst/programmer, preferably with a banking background, is required for service in our subsidiary in Zambia.

Experience in Cobol/SL5 and Burroughs B700 and L series equipment would be useful, although training will be given where necessary.

Position in a small development team offers considerable challenge involving wide all round responsibilities. Plans include the transfer of Head Office systems from vii-record equipment to a Burroughs B721, and implementation of new basic electronic accounting machines at branches, plus maintenance of existing systems.

Emoluments in Zambia will be not less than K18,000 per annum (£11,600 per annum at current rate of exchange). Fringe benefits include free furnished quarters in Zambia, non-contributory Pension Scheme (subject to satisfactory medical), local Zambian medical scheme etc. The assignment will be for three years initially during which period there will be generous home leave with passages paid. Thereafter, term may be extended by mutual agreement, or successful applicant will be offered a position within our Computer Services Department in Poole or elsewhere overseas.

If interested, please write giving full details of career to date to:

Mr. T.C. Shepherd,
Manager, Overseas Projects,
Computer Services Department,
Barclays Bank International Limited,
1 Wimborne Road, Poole,
Dorset BH15 2BB.

More room in a bigger pond!

For computer professionals in technical support

Further opportunities exist in our newly-structured UK Marketing Division for a whole variety of computer skills to support the wide spectrum of our users. A thorough product training will be given as required. The ICL Group's rapid and profitable growth, following a turnover increase of 45% in 1977, continues to mean ever-increasing commitments in our highly competitive market.

Bigger Company

ICL is already Europe's leading computer manufacturer. Its technological innovations have gained worldwide recognition, particularly the 2900 Series and more recently the Distributed Array Processor. The Group's market base covers 86 countries around the globe.

Brighter Opportunities

If you are one of the dedicated professionals we seek, you will work closely with our existing and prospective customers to optimise the application of our computer systems. Vacancies exist in:

Project Management £6,000-£10,000

Our senior PMs take responsibility for seeing through significant projects, and we particularly need people with proven ability in the computer field who can rapidly develop into these positions.

2900 Implementation £4,000-£8,000

Technical specialists who can ensure the smooth implementation of sophisticated computer systems.

General Support £4,000-£7,500

Technicians involved in pre- and post-sales activities to ensure customer satisfaction across a wide range of ICL products.

Consultancy £5,000-£9,000

Specialists in software or applications systems (eg TP, database) who can provide particular expertise to all levels of customer management and technical staff.

If your present environment is restricted and you are looking for something bigger and better with more variety and prospects, all this adds up to a real opportunity to move to a bigger pond. Alongside this, there are also a limited number of both sales and service openings in our UK Marketing Division.

Our new brochure 'Your future with ICL' for 'Technical Support' gives more details of the opportunities.

Little telephone our special Recruitment Centre based at Bailey's Hotel (opposite Gloucester Road underground station) on 01-47 1111 and ask for Diana Neale or one of her colleagues any time between 9.00 am and 6.00 pm.

Alternatively write with full details of your experience, quoting reference CW1301, to ICL (UK) Recruitment Centre, c/o Bailey's Hotel, 140 Gloucester Road, London SW7.

Our appointments range from North East to Oxford to the South Coast, both at ICL offices and on customer installations. We have substantial requirements in and around the following locations, where interviews will be arranged: London, Birmingham, Manchester, Edinburgh. References and a brochure are available for the men and women to whom we appoint.

Broader Variety

Our equipment spans the entire range of computer requirements from the small 1000 series through System 3000 to the largest 2900 machines and DAP.

You will have a wide range of exciting and varied development opportunities with the intellectual stimulation and being alongside some of the best people in the industry. We are particularly keen to appoint specialists in:

Operating Systems
MAC / FIVE
Languages and Compilers
Data Management
Transition Operations

Better Training

If you have the right technical ability plus initiative and going personality, this is more important than proven skills on one equipment. We have a number of training centres, with an excellent reputation for both technical and management training. The largest, at Winkley, has a training staff of 150.

International Computers

Think computers - think ICL.

MANAGEMENT & EXECUTIVE SELECTION

SALES

Have you heard the one about

Next year: We're going to release a new product (or at least the literature)

Next year: We're going to put more emphasis on support (i.e. capital letters in the brochure)

Next year: The company's marketing department will provide all the leads (providing you buy the dogs)

Next year: You could find yourself a Manager (could you please find him, we've been looking for days)

YOU HAVE!! Then don't wait for next year, act now

Talk to us about the positive companies in the industry.

We think you'll find there are more possibilities than you realise. Here are just a few

Recruitment Officer Computer Manufacturer

Starting salary around £8,000
LOCATION - SLOUGH

Our client is Kienzle Data Systems Limited, the U.K. subsidiary of one of Europe's largest and most successful computer manufacturers. Based in Slough, they now wish to employ a Recruitment Officer to be responsible for selecting line management in the very difficult job of recruiting 'the right people'.

The expansion programme that Kienzle have planned for the next few years is significant, and this is going to mean a large number of new employees will be required in many different locations in the United Kingdom.

Therefore, we want to meet an innovator, someone who will enjoy developing recruitment campaigns, writing advertisements and meeting people, and will not mind travelling within the U.K. to do so. The successful applicant should also be an experienced interviewer and will make a significant contribution to the decision of 'whether or not' an applicant is employed. Later, it is very likely that the position will develop into the full personnel function.

If you have an interest in personnel, or are already experienced in that area and can relate this to 'some years of experience' in computing, we would like to meet you.

Please send a description of your career to John Goldsmith, quoting reference no. 2078/CW.

WE ARE ALWAYS INTERESTED IN HELPING YOU WITH YOUR CAREER

Programming Team Leaders

£7500

Everest Double Glazing, part of the RTZ Group, is a fast growing and profitable company leading the market for secondary windows, patio doors and entrance doors.

The OP Department is now expanding its mainframe to meet this increased demand and the staff structure is being reorganised to match this rapid expansion. Three positions as Team Leader are being created and the provide excellent opportunities for career development for male/female computer personnel.

Applicants must be self starters with good, low level programming experience and the ability to motivate and control a small team of programmers. Knowledge of IBM Assembler together with experience of team leading on one or more major projects would be a distinct advantage.

A high starting salary is offered with a review after six months, and training in systems analysis for the right candidates. Also offered are four weeks holiday, staff discount and the opportunity to work in a pleasant location on the fringe of London just two minutes from Cuffley Station.

a member of the RTZ Group

Please write, with brief details to Mr. O. Kings, DP Manager, Everest Double Glazing Limited, Everest House, Cuffley, Potters Bar, Herts.

Another 18 Operations Professionals have joined us

... as a result of our recent advertisements and they are now key members of our team

THEIR WORKING CONDITIONS — are second to none, as you would expect in a multi-million pound data centre, one of the most advanced computer technology centres in the world.

THEIR CAREER PROSPECTS — are unrivalled as our philosophy is that computer operating provides the grounding for many career opportunities within D.P. at BL Cars.

And when you consider the equipment: 1 x 3033, 2 x 370/158 and 2 x 370/145 and our internal and external training schemes, need we say more?

THEIR BENEFITS — are those you would expect of a major company and include 5 weeks' holiday, pension, life assurance and sick pay schemes and substantial discount on BL cars and accessories. Plus generous relocation assistance as necessary to this pleasant rural area, where housing is favourably priced.

But we still need more ambitious men and women, so why not join them?

Right now we're looking for:

Network Operators • Senior Computer Operators

Ideally with experience in at least 2 of the following: VM, DOS/VS, VSI, IASIS, MVS, TSC, IMS or CICS. But more important, you should have a genuine interest in computing as a career.

So if you're looking to be part of a successful team, using the finest equipment available, ring Red Watts now on Redditch (0527) 28515 or alternatively write for an application form to:

Operations Manager, BL Cars Limited, Data Centre
PO Box 5, Redditch, Wores.

REMINDER

Don't forget whilst you're at Compac 78 to come and see Tektronix at the Royal Kensington Hotel on:

Tuesday, 5 December 1000-1800 hrs
Wednesday, 6 December

1000-2130 hrs.
Thursday, 7 December 1000-1800 hrs.
to discuss your future with us.

We're looking for Sales Executives to promote and sell our graphics terminals and associated computer peripherals; Product Support Engineers, to give technical support; and Systems Analysts for software support to our Sales Executives and our customers on their premises across a wide range of application problems.

If you can't make it to our informal talks, write to or phone Jim Rockall at Tektronix UK Ltd., Coldharbour Lane, Harpenden, Herts (Harpenden B3141) for an application form and information package.

Tektronix
COMMITTED TO EXCELLENCE

COMPUTER MANAGER

A Public Company requires for its group headquarters based in Central London a Computer Manager to take charge of its computer operations.

The successful candidate (male/female) will be responsible for computer and data processing operations currently time sharing on a 370/158 computer using bureau time for on line batch processing to nine terminals.

Applicants should have several years experience in systems design and data base usage, be acceptable to a substantial amount of travel in the UK, be qualified to deal with diverse and varied people for the interpretation and specification of their requirements, to introduce a in-house computer within the next 3-4 years.

Preferable age would be 28/35 years.

Salary will be fully commensurate with the responsibilities of the post together with fringe benefits which include a contributory pension scheme and company car.

Applications with details of background and experience to:
Group Personnel Consultant

CAMBRIDGE UNIVERSITY PRESS
Computer-Aided Composition

PROGRAMMER/ANALYST

An interesting opportunity has recently arisen for an experienced Programmer/Analyst to join our Computer Aided Composition team and to assist in the further development of an established and well proven computerised typesetting system. Duties would include systems analysis, specification, design, programming, testing, documentation and implementation.

Some successful system design and programming work are necessary requirements for this vacancy. General personal qualities of adaptability, self-motivation and the ability to communicate are more important than experience in particular applications or with specific systems. The position offers both responsibility and opportunity for self-development in an interesting project which will be the basis of the future technology of the printing industry.

In return, a realistic salary will be offered to the person with the appropriate qualifications and experience. There is also a wide range of attractive fringe benefits which include free life assurance, an excellent pension scheme, generous assistance with relocation expenses will be paid where appropriate and rental housing can be made available.

Consultancy in Manchester

Programmers & Loading Programmers to £6,000 + Benefits
Analyst Programmers to £6,200 + Benefits

Fraser Williams (Manchester) Ltd provides Consultancy services to a broad spectrum of existing and potential Computer users in the North West.

Current development projects in Commercial, Industrial, Scientific and Governmental organisations have created several vacancies for Programmers and Analyst Programmers.

Candidates should be able to produce evidence of their ability, and particular hardware or software expertise is less important than a sound educational background and a desire to develop a career in a challenging and varied environment.

Good salaries linked to a share of profits, together with business expenses and a high level of earnings.

SYSTEMS ANALYSTS and PROGRAMMERS £5-9K

Start the New Year with a great new career

We want to talk to experienced and ambitious Systems Analysts and Programmers on behalf of our client, a major multi-national company with their headquarters in London, who are all set to expand their already impressive computing facilities in the New Year. These key positions are currently available:—

SYSTEMS SUPPORT PROJECT LEADERS

Reporting directly to the Support Manager, you will be responsible for teams of Analysts and Programmers developing and maintaining new on-line systems for a wide range of commercial applications — salary to £9K.

PROGRAMMERS

Working within project teams consisting of both Systems Analysts and Programmers, you will be able to enhance your programming skills whilst being given every opportunity to gain the necessary knowledge and talent to move into either Systems Design or Analysis — salary to £7K.

For all these positions a knowledge of IBM DOS/VS with a programming background in Cobol is highly desirable.

The company provide a comprehensive training scheme both on an in-house and external readiness basis.

For further details contact Tony McGrath on 01-637 9611 or send your CV directly to him.

Suite 201/6 Albany House 324 Regent Street London W1R 5AA 01-637 9611

MANAGEMENT & EXECUTIVE SELECTION

COMPUTER OPERATORS

— Near Oxford Circus

Georgia 3 or OS/VS1 — Salary range £4,000 to £4,400 p.a. with valuable extra benefits

When it comes to job satisfaction, it's worth talking to London Transport, the world's largest urban transport system.

At our rapidly expanding Data Processing Department in Central London, we're looking for computer staff with at least 18 months' experience in Georgia 3 or OS/VS1 operation.

The installation currently comprises 2 ICL 1004S, 2 ICL 2904, IBM 370/148 and IBM Series 1 computers, handling Batch Processing, Transaction Processing, Interactive Processing and On-Line Enquiry systems.

Career development and promotional prospects are excellent.

As well as an attractive starting salary, we can also offer other benefits, including FREE TRAVEL ON LONDON TRANSPORT SERVICES AT ALL TIMES.

Telephone the Senior Operations Controller on 01-637 9144, or write to the Staff Appointments and Development Officer, 56 Broadway, London SW1H 0BD, quoting reference 955/C.

LONDON TRANSPORT

West Yorkshire Metropolitan County Council
Traffic Unit

OPERATOR/TECHNICIAN POST REF. TF34005/8/77
T3 £3,732-£4,148 (including supplement) plus 12% shift allowances

The UTC Scheme involves the Computer Control of Traffic Signals in Leeds and Bradford control centres being operational 0600 to 1800 hours Monday to Saturday on a shift basis.

The duties of the post include both control room operations and control centre and on the street. Appropriate training will be provided where necessary.

Applicants should have operational control room experience or a background in the electrical/electronic application area. Driving licence required.

Application forms may be obtained from: Directorate of Planning, Engineering and Transportation, Room 228, County Hall, Wakefield, and should be returned by 11 December 1978.

A.T.E. PROGRAMMER

Candidates should have a degree in computer science or equivalent and be able to write in Fortran, ALGOL, BASIC, PASCAL, COBOL, PL/I, and C. The post involves the development of programs for the control of industrial machinery and the design of control systems. The post is based in the Midlands and involves travel to various sites. The salary is £4,000 per annum plus benefits. For further details and application form, write to: A.T.E. Instruments, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000.

Ipars & Tropics

Rendack is an international software house with offices in the Netherlands, United Kingdom and the U.S.A. Our group of companies work in various fields and aspects of the computer industry and maintain several specialist divisions.

For our Airlines Support Division we are currently seeking to employ, on a permanent or contract basis, data processing personnel with experience in the IPARS and TROPICS fields to join our companies as part of our planned expansion in early 1979. Successful applicants will work on one of our projects in the Netherlands or the U.S.A., where salaries, expenses and benefits will be well above average.

Interviews will be held in London and Amsterdam throughout December. For further details please contact our London or Amsterdam office.

Advanced Systems Development

Project your career into the 1980's

Opportunities for graduates and experienced DP staff in mapping and charting applications.

For the experienced programmer or systems analyst, the computer scientist, or other numerate graduate seeking a career in computing, few areas can rival the rapidly evolving and highly advanced computer environment of the MOD Mapping and Charting Establishment, either in terms of training and career development opportunity or of intellectual stimulus and challenge. Here the provision of all land mapping and air charting for the Army and RAF is undertaken and much of the work is operational and high-priority. Extremely tight time schedules and constantly growing demand necessitate an increasing commitment to automated production methods and to the supply of map information in digital form, and the team of computer scientists play a central role in ensuring the efficient operations of the unit. Working in this highly sophisticated area of applications, they use some of the most advanced computerised cartography equipment in the world, with a current hardware configuration consisting of two mainframe computers and a number of minis, together with a range of flatbed and drum automatic plotters, free standing and automatic digitisers and edit stations. Over the next five years, however, all the existing hardware and software is to be upgraded, and this, together with the production of digital data in support of an RAF flight simulator project, constitute the two major projects at present in hand.

There are opportunities, within the Science Group, for graduates in the numerical sciences, with or without DP experience, to join the

Establishment at this exciting stage, and to work on the development of advanced computer systems in the areas of programming, systems analysis and design, and hardware and software requirement analysis. The knowledge and experience you will gain will be invaluable training in basic and advanced concepts, and aimed at fulfilling your development needs, and job rotation will ensure a broad-based understanding to prepare you for management responsibility. Staff are encouraged to maintain currency in hardware and software development and there will be opportunities to attend conferences and seminars.

The Establishment is located at Feltham, Middlesex, and is therefore easily accessible from both London and the surrounding rural and suburban areas.

Salaries for Scientific Officers range from £3100 to £4600. The Higher Scientific Officer range is £4575 to £5725.

Qualifications: A good honours degree is required for most posts, but HNC/HND is suitable for some. For appointments as Higher Scientific Officer candidates must have at least 2 years relevant postgraduate experience.

For further details and application forms (to be returned by 22 December 1978) write to Ministry of Defence, Mapping and Charting Establishment, Feltham, Middlesex TW13 7AF, or telephone 01-890 3622, ext. 90 (Mrs. Vera Gibbs) or ext. 253 (Mrs. Pat Morrison). Please quote ref: S.1/3771.

USER SUPPORT PROGRAMMERS

For experienced graduates or experienced programmers who can support and develop the user's use of the computer, this is a very exciting and challenging role. They will provide a range of advice and support to the user, and will also be responsible for the development of user support materials and the training of new users. The role is a key one in the development of the computer system, and the user support programmer will be responsible for ensuring that the user is able to use the system effectively and efficiently.

The hardware: Dec 1011, 1020, 1030, 1040, 1050, 1060, 1070, 1080, 1090, 1100, 1110, 1120, 1130, 1140, 1150, 1160, 1170, 1180, 1190, 1200, 1210, 1220, 1230, 1240, 1250, 1260, 1270, 1280, 1290, 1300, 1310, 1320, 1330, 1340, 1350, 1360, 1370, 1380, 1390, 1400, 1410, 1420, 1430, 1440, 1450, 1460, 1470, 1480, 1490, 1500, 1510, 1520, 1530, 1540, 1550, 1560, 1570, 1580, 1590, 1600, 1610, 1620, 1630, SYSTEMS STAFF
to £15,500

A forward looking systems development plan, which is Board approved, is the reason why our client, a well known international company, wishes to recruit additional systems staff.

The prospects are interesting and the positions offer the opportunity to work on a wide range of new systems developments employing the latest hardware and software.

Sheffield is a modern city, with excellent sporting and cultural facilities, and is situated within easy reach of the Peak District National Park. House prices in the area are reasonable without the disadvantages of long distance commuting.

We think these opportunities are well worth considering and we would like to meet systems analysts to discuss them in more specific detail.

We will meet you in the North, Midlands or London and, by the way, if you are not from the Sheffield area our client will pay your relocation costs.

Please contact Ivor Norton, quoting reference number c/78100, at either office to arrange a discussion about these vacancies or just to learn more about your market potential.

International Business Corporation WEST LONDON

Our Clients, marketing business systems based on Data General mini computers, have been outstandingly successful both internationally and throughout the U.K. Their present Clients include leading names in broadcasting, leisure, holiday and entertainments and in the construction and civil engineering industries.

They are now looking to significantly expand their sales and sales support divisions and to this end we have been retained to find ambitious and self-motivated men and women with experience in small business systems or computer bureaux or with a wide applications knowledge.

In particular they are looking for:

AREA SALES STAFF
QUOTA EARNINGS
£15,000 + CAR

SALES SUPPORT EXECUTIVES
CIRCA £8,000 + CAR

COBOL PROGRAMMERS
CIRCA £7,000

Here is an ideal opportunity for you to join a dynamic team with excellent career prospects. Although most appointments are within the U.K., opportunities do exist for you to undertake European and other international assignments.

Interested applicants should contact ROY HIGHFIELD for more information or to arrange an interview.

SPECIALIST RECRUITMENT CONSULTANTS

Two Industry Specialists Building Societies Banking (Commercial/Foreign) Circa £9,500 London

Over the last three months our Clients, a large International Computer Manufacturer, have been rationalising and restructuring their Marketing Support Division.

This vital central function consists of a number of experts in particular fields whose job it is to identify and support sales into specific market sectors defined either by application or by product. Marketing executives are involved in a variety of functions such as sales support, promotional work, training and "workshop" activities, supporting large sales, designing applications packages, etc.

There is an immediate need to fill two important application sectors within the Division, Banking (commercial/foreign) and Building Societies. The requirement in each case is for a person, possibly a Systems Analyst, Project Leader, O & M Specialist etc., with particularly heavy experience in one of these environments from "grass-roots" level upwards. Obviously a knowledge of computer based systems would be very advantageous but the main expertise the person would be bringing to the Division, is their knowledge of their particular industry. No marketing experience per se is required as there is comprehensive backing available in this area.

This is clearly a first class opportunity to move to a dynamic rewarding and lucrative environment. If you feel you have the right qualities and would like to discuss the situation, please telephone BOB BOWER the Advertising Director. We look forward to your telephone call.

E.M.S. urgently need over twenty more staff to support the Turnkey Systems Division. Staff are working on a wide range of development projects for both first time and network users. Ability to programme in Cobol and work as a small team member, committed to tight deadlines, will be important.

In house machines include Honeywell Level 8s and ICL 2904s. Experience of Cobol on any machine will be acceptable as retraining will be given. Applications include Ledger, Stock Control, Financial Planning, Payroll, etc. Modular programming is currently used in an on-line environment. All programmers have immediate terminal access for development and testing.

Occasional travel to client sites for testing and installation will be involved. Overtime working to help with tight deadlines will be essential. All Analysts must have had previous programming experience and be prepared to assist on frequent occasions whenever peak programming loading occurs. Analysts will also be given Business Analyst opportunities to undertake feasibility studies and make client presentations assisting the Marketing teams. The installation is ultra-modern and attractively furnished. Excellent career opportunities are available for all levels of motivated staff, keen to make a personal contribution to our outstanding growth record.

Either attend our interviews directly as advertised, or return your career form today and telephone us for an early meeting. Don't miss this outstanding opportunity of working on 1980's applications now.

Contact: Don Philip, Gannan Handlip.

Staff are urgently required to support growing client consulting commitments throughout the region and to work on a wide variety of development and maintenance projects. Applications include Ledger, Stock Control, Distribution Systems, Financial Planning through to Payroll. Candidates should possess a minimum 3 years' systems experience and be capable of working in a team environment both within very large and small installations. Opportunities exist to gain experience of major merchandising systems and futuristic hardware. So, with at least 3 years' systems experience, if you are interested in earning an attractive salary and expenses package, complete the attached career form today and return it to E.M.S. without delay.

Consultant: John Wood (Newcastle Office).

EMS is planning substantial further development of both our Consultancy and Turnkey Systems Divisions during the coming months. Our Consultancy activities extend across all mainline ranges and encompass a wide range of industrial/commercial organisations. Applications must, therefore, present as high level Business Analysts capable of rapidly assessing clients' requirements and proposing relevant solutions where appropriate or quantifying the relevant consulting experience required in either systems or programming and providing the necessary staff from E.M.S. resources. A vast potential market exists for salesmen marketing resource support.

Equally, our Turnkey Systems Division provides total UK coverage, marketing Honeywell Level 6 mini-computer systems and supporting software to a wide range of UK users.

Experienced Salesmen capable of developing their own territories are urgently required. A substantial quantity of leads are also supplied by extensive and vigorous advertising campaigns and Road Show ventures. Salesmen must possess an adequate mini-computer knowledge for Turnkey Systems positions. Cars will be provided with adequate base salaries and high prospective incentives. Apply by telephone for interview during the next week at our Birmingham Data Centre. All UK territories will be controlled from the pending regional development of other Centres.

Consultant: John Wood.

ANALYSTS AND PROGRAMMERS

LONDON
Candidates with one year or more O/P experience are urgently required by hundreds of London and Home Counties clients, prepared to pay attractive salaries in order to attract experienced development staff.

E.M.S. are obtaining as many as five offers for virtually all London and Home Counties staff using our computerised recruitment system. We are literally covering every single installation in the country. No one can afford not to find their next appointment without the E.M.S. recruitment system. You're cross matched against every vacancy, rather than just the two or three advertised each week which appear of interest. Every installation, all hardware, operating systems, languages and applications. How can you compete against E.M.S.? We get results and have thousands of satisfied clients each year.

Just complete the attached application form and see how fast we get results for you. Don't miss the golden opportunity of E.M.S. services on your behalf. We have a worldwide service, second to none. For ten minutes of your time to complete the form, we'll prove it to you.

Consultant: Don Philip, Carol Proudman. Telephone 021-454 7908.

PROGRAMMER & ANALYSTS
SURREY TO £5,300 & MORTGAGE

Candidates should have a minimum 18 months' experience. They will join mixed disciplined teams involved in Life, Motor or General Insurance applications. Analysts will be responsible for user liaison and translating his requirements into programmes. Programme will most probably become involved in either database (ADABAS) or 7P and will work closely with the Analysts from specifications through to final testing. IBM hardware experience under DOS or DOS/VIS would be preferred, although other machines will be considered. Languages are PL/1 and Assembler. Agein, however, Cobol programmers prepared to re-train will be considered.

Consultant — Carol Proudman.

GROUP CONSULTANT/ANALYST
£7,000 +

Our clients, as a subsidiary of a large Swiss corporation, have developed the need for an experienced Senior Business Analyst to both maintain/enhance existing corporate systems, and to undertake consulting assignments. Experience of operating either in a consulting role with a major software group, or in an internal management services capacity, would be desirable. Equally, ability to operate above on large, high value projects and make balanced concise judgements, will be essential. Presentation will be an important role, consequently self-assurance must be evident at initial interview stages.

Consultant—Don Philp.

COVERED BY EMPLOYERS AND UNIONS.
MANAGED
TO ERASE A CAR - 1965.

The manager plans, implements and runs the U.K. Communications network consisting of four FOB points. He will also plan and control international communications requirements currently consisting of eight international circuits, manage a staff of 11 comms technicians and manage the remote site operations who number 3 and employ a further 11 people. Applicants must have solid real time experience, as well as possessing in depth technical ability in the comms field. This position is urgent. Please return the attached application form as soon as possible. Consultant — Don Philip

ANALYST/PROGRAMMER
TO \$6,255 + MORTGAGE — Surrey

A Life Assurance group require an Analyst with 2 to 3 years' COBOL programming background to lead a small team of Programmers developing on-line Insurance and Pension systems for an ICL 2904. The company is located in the south of Surrey and offers attractive fringe benefits, including mortgage facilities and a non-contributory pension.

Consultant — Carol Proudman.

**ANALYSTS & PROGRAMMERS
TO £6,500 + BONUS - HAYES, MIDDLESEX**

A large Honeywell user is developing a management information system to work in a real time environment and urgently requires a significant quantity of extra staff to join in Project Leader and Project Manager roles. Basic Accounting has already now been developed. Previous Honeywell experience would certainly be advantageous but is not essential. The client is also developing an extensive terminal network, offering significant network interest to new applicants.

Consultant — Don Philp.

SHIFT SUPERVISOR
TO £4,261 + 27½% SHIFT ALLOWANCE

Duties include ensuring satisfactory liaison between the shift and scheduling sections; to carry out projects assigned by Operation Systems Supervisor; to be responsible for on-job training of all subordinate staff. Equally, to ensure that all operating standards are met. The supervisor will also attend such meetings as required, which will include project meetings, staff meetings, etc.

Consultant—Don Philp.

**PROGRAMMERS
TO £5,500—LEICS.**

An opportunity exists for a young graduate with 2 or 3 years' practical experience, to enter the R & D Labete team of a well-known chemical processor. A small team working environment is offered. Currently, the company have their own 1902T, but also use an IBM bureau service. Scientific packages are currently utilized. Appropriate training will be given. A degree in Maths, Statistics or R. Scientific subject will be required. Re-location assistance will be provided where appropriate. Consultant—Don Philo.

UNION PRESSURE - ABOVE
HEADS. 400
SENIOR PROJECT MANAGER
TO BE

An IBM DOS/VS Programmer *must* urgently *require* additional staff to join an industrial group developing MICS, DROL and using PL/1 and COBOL. A minimum 3 years' experience in IBM 370 series will be required either in a Systems or Programming capacity. Experience in the areas of Logical Systems, Order Processing, Stock Control and Production Planning, would be *highly* *attractive*. salaries are available for the second experienced candidate. *Consultant - Good Prospect.*

ANALYSTS STOKE-ON-TRENT TO £5,300

The client whilst preferring a mature Analyst, with a minimum 2 to 3 years' practical systems experience, would also accept an alternative also accept a junior Analyst with a good commercial background in an engineering environment. Applications will include Financial Systems and assisting with the development of Production Control and Stock Control. The group currently use a DEC Bureau facility. Applicants must be capable at senior level, of taking projects through from initial feasibility study to design, programme specifications and final installation. Equally, communications ability at all levels of the company will be important. Consultant—Don Walkste, 0782 623665.

**SENIOR ANALYST /
CONSULTANTS**
CITY TO £8,500 +

Graduates with a Database knowledge, perhaps also with all or chemical experience, are urgently required by a large IBM user. Candidates are required for senior posts in teams working on designing business systems, data analysis systems, general trading systems and group accounting. All applicants will ideally be in their late 20's and 30's and initially will be London based. Group travel will be available if required. Both career prospects and job interest are unlikely to be rivaled elsewhere throughout London. First-class opportunities for Top Market candidates.

Consultant - Don Philip.

STANDARDS AUDITORS
PROJECT LEADERS.—IMS
ANALYST PROGRAMMERS.—IBM

CICS ANALYSTS & PROGS.
A further number of attractive vacancies are now coming available throughout the consulates, Ministries, Oil Companies and Trading Groups in Kuwait. Candidates with IBM or Mini experience are most sought after. A Standards Auditor, capable of installing NCC standards, is an urgent priority to work in a ministerial environment. Analysts and Programmers with IMS and CICS experience are required for leading Banks. Consistent vacancies are available for OS COBOL Programmers. Due to accommodation shortages, strong preference is always for single or married couples with no children. A maximum of 2 children will be accepted where candidates with no children have not been available. All candidates should be qualified to HNC or Degree level and possess a minimum of 3 years' practical experience.
Consultant—John Wood, 0782 623605
or Don Philo, 021-464 7906.

ANALYST/PROGRAMMER
UP TO \$8,000 + CAR

UP TO £8,000 + CAR
BERKSHIRE

Our client who has recently ordered an IBM System 38 and a remote System 34, is looking for a highly professional Analyst/Programmer with a very sound recent technical background and the potential and drive to become the company's Data Processing Manager.

The successful applicant for this challenging and rewarding position will have a proven record of successful program/systems implementation and 2 years' experience of programming in RPG and/or COBOL, and he or she will initially play the major role in implementing an extremely sophisticated order processing and inventory control system, with equally challenging and interesting new developments planned for the future.

The position, as a vital member of the management team drawn from all areas of the company's activities, reports directly to the European Data Processing Manager and is based in rural surroundings in the heart of the Thames Valley. There will be a future requirement for some European travel.

Our client is offering an exceptionally attractive benefits package in addition to a starting salary of up to £8,000 per annum, to the successful applicant who has the or has long term career in mind.

If you are interested in this first-class opportunity, please complete and return the form to: Mr. Gordon Don Philip on 021-454 7906.

ANALYST/PROGRAMMERS
BRISTOL SALARY C.£6,000

CRISTAL **SALARY £12,000**

Our client, a manufacturing and distribution group, is replacing the present central computing facility by IBM system 344.

This re-organisation has created the need for experienced Analysts/Programmers to play a major role in the development and day-to-day management of new on-line systems in liaison with users.

If you have at least 3 years' experience in all aspects of D.P., i.e. Systems Analysis, Design, Programming, Documentation and Project Control, and you are also able to communicate with all levels of management, this could be your chance to move into a responsible position, where you must be able to identify commercial needs, recommend and implement practical D.P. systems.

In addition, our client is offering a generous staff benefits package, so don't hesitate; complete and return the attached application form or telephone Don Philip on 021-464-7908.

SYSTEMS PROGRAMMERS
—BIRMINGHAM TO £6,000

MINI COMPUTERS—BIRMINGHAM

EMS require additional experienced Systems Programmers to work on a variety of both mini and micro based systems. Product areas will include operating systems and analysis and design, communications systems expertise and guidance, and internal consultant providing expertise and guidance. The applications teams working with on Turnkey Systems and Time-sharing. Equally, some exists for occasional live-time client duties. Developing networking requirements and a networking system. Design and implementation of a networked system. Multiple operating systems will be released by major suppliers such as Honeywell, providing access opportunity for full new product involvement, and motivated development by relevant candidates, prepared to accept occasional, unattractive hours to assist the centre to rapidly meet the full use of new facilities and addition to early identification and connection of any potential bugs, to ensure smooth installation of both EMS Group and client systems. Good communication skills and personal future will be sought to ensure the full benefit of EMS developments.

Software Engineers Programmers

By leading or joining one of our Switching New Products software teams you will have the opportunity to participate in the design of new microprocessor controlled products, that are actually achieving the much heralded convergence of communications and computing. You will be using all advanced programming techniques, in particular reliability and integrity techniques, that were first developed for the exacting real time requirements of telecommunications, and which are now being introduced in many other areas.

ANALYSTS and PROGRAMMERS WHO'VE MADE IT OR PROGRAMMERS WHO ARE GOING TO . . . !

Our client is a major electrical and electronic manufacturing group based in the Northern Home Counties, within easy reach of London. The systems and programming area is expanding again in order to keep pace with the ever-increasing growth of this successful and well-established company. Consequently, first career opportunities are being offered to systems analysts and senior programmers who wish to become analysts. There are also two vacancies for programmers who wish to further their technical support experience or move into that specialised area.

SYSTEMS ANALYSTS

Applications are invited from analysts, senior programmers and graduates with a sound programming background and the ability to specify programs. This position will involve systems design work.

In return for this expertise a salary of c. £6,850 p.a. is offered.

TECHNICAL SUPPORT PROGRAMMERS

Applications are invited from conscientious programmers with a minimum of one year's programming experience using PLAN. A knowledge of COBOL is desirable but not essential.

In return for these qualities a salary of c. £6,000 p.a. is offered.

Successful applicants will have the opportunity to further their technical experience, joining a small, friendly and yet highly professional team involved in a wide range of applications including the development of personnel and nominal ledger systems. This company has a policy whereby promotions are made from within wherever possible. Benefits are excellent and include 5 weeks' holiday after 3 years' service.

Further information and an application form contact Amanda Banks

TEL 01-439 3671

HEXAGON computer services

100, AVONDALE ROAD, LONDON W10 6AA

TEESSIDE POLYTECHNIC Computer Centre

The Computer Centre provides a computing service for the teaching, research and administrative work of the whole Polytechnic. It is equipped with a powerful Univac 11/15 main frame system, which will support over 50 terminals and an extensive range of peripheral devices.

To support the new main frame a number of additional posts have recently been established. Applicants are now invited for the following posts which offer an opportunity to join a growing team engaged on a number of interesting developments.

PROJECTS MANAGER (Systems Software) Now Post
£6,060-£6,702 (including supplements)

To lead a small team of Programmers/Analysts responsible for the maintenance, modification and enhancement of the Univac EXLC II Operating System and other systems software. In depth experience of operating systems for large computers is essential.

PROJECTS MANAGER (Applications Programming) Now Post
£6,060-£6,702 (including supplements)

To lead a team of Programmers/Analysts responsible for the planning and implementation of a wide range of applications software, including statistical and numerical packages, and engineering and business software. Offering specialist advice on the use and supporting library and administrative computing. Broad experience of computer applications including technical computing is essential.

PROGRAMMER ANALYSTS/SENIOR PROGRAMMER ANALYSTS (New and Regroded Posts)
£3,732-£5,075 (Programmer Analysts - including supplements)

£5,232-£6,060 (Senior Programmer Analysts - including supplements)

Several posts are available. Candidates able to offer in depth specialist knowledge in one or other of the areas of the Centre's interest, including operating systems, graphical computing, computer communications, statistical and numerical computing, databases, technical writing and instruction and Library Data Processing will be particularly welcome. Applications may be offered on the more senior grade to candidates with sufficient experience.

Candidates for the posts should possess a degree or similar level qualification in a suitable subject.

Application forms and further particulars from: Assistant Secretary (Academic), Teesside Polytechnic, Borough Road, Middlesbrough, Cleveland TS1 3BA, to whom they should be returned by Friday, 20 December, 1978.

ST. LOUIS COLLEGE FOR TRAINING THE DEAF FOR COMMERCIAL AND INDUSTRIAL CAREER

DATA PREPARATION INSTRUCTOR
Full time position to train operators to commercial standards on key-operated data entry equipment, including a direct entry, punched card and tape reader. Successful candidates will be offered a salary of £4,000 p.a. plus benefits. Apply to: Mr. J. H. Jones, St. Louis College, 100, St. Louis Road, London E10 5JF.

MINI COMPUTER PROGRAMMERS

Can you write operating systems?

Do you have experience of any mini computer assembly language and of an Algol-like language? If so, please phone 0223 312341 or write to Mr. J. H. Jones, St. Louis College, 100, St. Louis Road, London E10 5JF.

COMPUTER RECRUITMENT DIVISION

SYSTEMS & PROGRAMMING

ICL COBOL TO £5,000 + Mortgage

The POLYTECHNIC WOLVERHAMPTON

Computer Centre

The Polytechnic is establishing a Computer Centre to be responsible for computing facilities and services. A large dual PRIME 500 interactive system supporting initially 64 terminals and batch load will replace the existing ICL 1903A service in mid 1979. Additional computer staff are required and applications are invited for the posts of:-

Applications Manager

£6342 - £7044 per annum including supplement.
To be responsible for the applications programming group. Candidates should have good qualifications and substantial experience of project management and control of the needs of computer users in an educational or business and industrial environment.

Senior Programmers/Systems Analysts

£5232 - £6080 per annum including supplement.
Candidates should have several years experience in at least one of the scientific, commercial, administrative, systems programming or user support areas, and be able to undertake programming systems design and development, and coordinate small project teams.

Programmers

£3732 - £5073 per annum including supplement.
Applicants should have a sound computing background and experience in applications or systems programming.
Further details and application forms from Personnel, The Polytechnic, Wolverhampton WV1 1LY. Telephone - Wolverhampton 27371.

IMPERIAL COLLEGE OF SCIENCE AND TECHNOLOGY

COMPUTER PROGRAMMER (Part-Time)

A vacancy for a part-time (18 hours per week) Computer Programmer has arisen at the Imperial College Field Station at Silwood Park, Ascot. The successful applicant will be expected to advise research students on the use of terminals and programme packages, and also in developing programmes and write instructions for their general use. Salary will be pro rata on the scale £3384 to £4133 p.a. per annum. Applications should be made to Professor T. R. E. Southwood, Imperial College, Field Station, Silwood Park, Ascot, Berks. (Tel: 0890 230171), before 1 January, 1979.

UNIVERSITY OF DUNDEE

Department of Electrical Engineering and Electronics

Applications are invited for a vacancy for an **ELECTRONIC TECHNICIAN** to participate in the development and construction of specialised electronic equipment for research and teaching in the above department. Applicants should have an appropriate ONC or equivalent qualification and considerable relevant practical experience preferably including some in micro-computers and micro-processors. Candidates with at least seven years' experience will be considered for appointment at Technician Grade 5. Successful candidates will be offered an annual salary of £4133 p.a. plus a local area allowance of £1380 (£3770 under review). Applications forms may be obtained from the Establishments Office, The University, Dundee, DD1 1HN, should be returned as soon as possible. Please quote Ref: EET/77/78CW.

CHELSEA COLLEGE

University of London

PROGRAMMER

required to work in the Information Processing Group of the Computing Unit, to develop and support applications mainly written in COBOL and BASIC. Education to 'A' level standard, or equivalent computing experience will be required. Salary scale - £2468-£4107 or £4107-£4748 per annum (inclusive) depending on qualifications and experience.

Further details and application forms from the Secretary, Computing Centre, Chelsea College, Fulham Place, London SW6 6PL Tel 01-736 1244.

PROGRAMMERS

SENIOR PROGRAMMERS & SYSTEMS PROGRAMMERS (SCIENTIFIC)

There's more scope for your skills at Dataskil

Reading System Centre

Dataskil have increased their turnover by 100% over the past two years, and their staff by 50% — and growth shows no signs of slackening. Here at the System Centre we supply the company's computing needs using a complete range of ICL equipment. We now need more people to help us handle our increased workload. Joining us now and working in an expanding and successful organisation really will give you more scope to develop your skills, and above all, rapid career progression.

Technical Support Programmers up to £5,500

If you are an experienced applications programmer with a keen interest in exploiting the facilities of a large operating system, then we would like to hear from you. You need to have at least two years' programming experience in one or more of COBOL, FORTRAN or ALGOL, on an ICL Computer System. We will give you extensive training in the exploitation of VME/B at the Reading System Centre, where we have a large ICL 2970 supporting a varied communications network. The work demands the ability to absorb new information quickly, and a keen interest in solving users and systems problems. For an application form or further details, please telephone Nigel Remington on Reading (0734) 582041, ext. 66 during the day, or Reading 472353 in the evenings. Ref. CW112/A.

1900 & Small Systems Operators £3,000-£5,000 + 20% shift allowance

We are looking for people to assist in the supply of 1900 services to both Dataskil and external customers. We are currently using a 1904S, 1903A and 2904, all running a varied selection of operating systems including George 3, and we are due to add a 2960 in 1979. You should have some experience of 1900 machines and operating systems, especially George 3, as well as a real desire to develop your career. You will have the opportunity to get involved in the technical support activities — with the chance of moving permanently into this area. If you're interested and would like to know more about the jobs, then contact Roger Tinson at the Reading System Centre, Reading (0734) 582041 or Reading 690986 during the evening. Ref. CW112/B.

If it's inconvenient to phone you may apply for either of these jobs by writing to: Gareth Bonnett-Coles, Dataskil Limited, 118-128 London Street, Reading, Berks, RG1 4SU. Please quote the appropriate reference.

ICL Dataskil
The Computer Professionals

COMPUTER OPERATIONS SUPERVISOR

A SOMEWHAT MISLEADING TITLE. What is required is a person with MANAGEMENT FLAIR, the ability to motivate people, the understanding required to identify with management objectives and to work well with all levels of fellow professionals.

A thorough understanding of ICL hardware and on-line communications is essential. The installation is based around an ICL 2903/30, operating in both real-time and batch modes.

The company consider this a vitally important position, and as such offer a salary range starting at £5,000, but with considerable flexibility over this figure for the suitably motivated applicant.

Benefits include an attractive shift system, and the travel concessions normally expected of a major tour operator.

Experience: Degree level in business studies or accountancy qualification + 6 years' administration systems design or management involving application of computers + 2 years O & M analysis.

ANALYST/PROGRAMMERS

City to £7,500

An opportunity for Analyst/Programmers with some B1700, 2700 or 3700 and COBOL proficiency to join a progressive Software House/Bureau specialising in Burroughs and PDP systems work on commercial/financial applications. Successful candidates will probably have 3-4 years' experience in data processing and will be capable of working in a project team to fixed time scales.

Ref. 48/3

SOFTWARE DESIGNERS

Holland to £14,000

This division of a diverse American Service company specialising in advanced system software and on-line projects are looking for Designers with experience in the design/development of compilers, operating systems and interactive facilities. A minimum of 10 years' experience, the ability to design/specify software and develop basic concepts for a new range Of European minicomputer business machines.

Ref. 48/4

SENIOR CONSULTANT

Munich A1 Neg.

A well-established Technical Services company based in this country require a Senior Consultant on a one-year renewable contract in Munich to advise on conversion aids from IBM system 3 to Siemens 7,700 range. Applicants will ideally have IBM 370 software background, 2 years + software development experience, and an understanding of German.

Ref. 48/5

SENIOR ANALYST

C. London £6,500 + Car +

Small business machine/intelligent terminal manufacturer requires a Senior Analyst to work on a new range of minis developing software/commercial systems. Whilst a knowledge of PLI and a mini background gained with a manufacturer are preferable, in-depth experience of communications is essential. Through involvement with clients lies the opportunity to progress into sales.

Ref. 48/6

SYSTEMS ANALYST

City to £6,700

Applications are invited for the position of Systems Analyst with an international insurance organisation. Candidates will have 3-4 years' DP experience with a programming background in an insurance/financial environment. The languages COBOL and Assembler are preferable for their IBM 370 under DOS/VS operating system. Company benefits include free life insurance, pension scheme, BUPA and a subsidised canteen. Relocation expenses will be considered.

Ref. 48/7

ANALYST/PROGRAMMERS

London to £7,500

Our clients providing telecommunications network services overseas on an IBM 370 OS/VS2 are looking for creative men and women to enhance/amend/update the computer model to reflect the changing nature of the telecommunications network. A Degree or professional qualification, good COBOL, and an ability to work to tight schedules will ensure an interview within one week of application.

The post offers a challenging position for an enthusiastic person with considerable scope for initiative in the use of computers in Economics. Applicants should have an MSc degree in Economics or Statistics, some experience of writing FORTRAN programs, and the ability to cope sympathetically with users' problems. Salary, according to age and experience, will be in the range £3864-£5732. Application forms, returnable by 30 December 1978, should be obtained from the Assistant Personnel Officer, LSE, Houghton Street, WC2A 2AE. 025 7885 Ext. 724

**CHELSEA COLLEGE
University of London
SENIOR COMPUTER
OPERATOR**

(Two Shifts)

Required to handle shifts operating local and remote batch services and multiple access interactive machines. The College Computer Centre operates a newly installed Harris 125 interactive computer for 18 terminals (the first in a UK university) under the VULCAN operating system. An Eldec 4150 mainframe computer with back and up to 18 interactive terminals, fronted by a PDP 11/40 which also handles an RJL link to University of London CDC computers, is the established service interface. Data communications are handled via a network controlled by the Gould PAC-3. A responsible and well educated person is sought with O-level Maths and English at minimum and preferably a technical background. Conditions of employment include a 5-day week, 4 weeks holiday plus one week in both Christmas and Easter and salary to £14,000 inclusive. Application forms and information, by arrangement with Secretary, Computer Centre, Chelsea College (University of London), Fulton Place, Fulham Broadway, London SW10, telephone 01-874 1244.

One programme that's not moving wavelength

Because we're on the right wavelength already at Swanley, Kent.

Our programme of rapid expansion means interesting, varied and rewarding development work and a deep involvement for analysts and programmers at the very nucleus of our expanding group operation.

The International Group with 20,000 employees means many things. It means the Superstore division with 8 Superstores already in existence and many more planned for the future. It means recent acquisitions like Wallis Supermarkets and Alliance Wholesale Grocers. It also means Kearsley & Tonge, one of the largest catering distributors and Priceline, opening stores throughout the country. And of course, there are the many large and small International Supermarkets.

For every one of these - and our other future plans - we will need the expertise and knowledge to devise the variety of systems and programmes for our many operations. This will mean visits to new locations and a perpetual source of new and exciting projects to get immersed in.

To handle this expansion programme we are building up our team of programmers and analysts at Swanley, Kent.

The hardware consists of an IBM 370/145 512K operating under DOS/POWER/CICS/VS with 40 VDUs, using the latest stock control package INFOREM. And future installations include on-line IBM Series 1, Minis and IBM System 34. A knowledge of COBOL Language would be a distinct advantage.

Programmers to £6000 pa. Ideally we would like to hear from programmers who see themselves as analysts in a few years. But if you have about two years' experience of programming and feel ready to take on new responsibilities, we would like to hear from you.

Analysts £6500 pa. You will be involved in many interesting areas at analysis and be required to design systems for the entire network of the International Group. This will mean visits to a wide variety of locations from 32,000 sq. ft. superstores to busy quick turn-round depots.

Here's a unique opportunity to gain valuable experience with International in a lively and friendly atmosphere. Find out more. Contact our Personnel Officer, Joan Leigh at International Stores, Goldsall Road, Swanley, Kent. Tel: Swanley 65533.

Our programme at International is one of expansion. It's a programme that's on the right wavelength - YOUR WAVELENGTH.

COBOL Programmers

Let's talk about success — yours and ours!

There's a lot we could say about the areas of computing in which we lead the world — large-scale computers, computer peripherals, computer consumables, computer-based education and, of course, computer services. However, we recognise that the success of a company is only relevant to the employee when it directly affects his or her career and financial situation.

When we talk about success we refer to facts like our commercial systems and programming department having expanded from 17 to 35 within the last year. Three new management positions have been created and existing staff have been promoted within the same period. Expansion has necessitated the installation of an IBM 3031. This, and many more employee opportunities to follow, is the result of our rapid and continuing growth.

Ours is not run-of-the-mill programming, it is stimulating work involving all aspects of industry and commerce. Personal progress is not left to chance either, ongoing education is a commitment at Control Data, not a rumour.

So if you really care about your future, and have more than two years experience of Cobol (any computer!), wish to work in the LONDON area and a salary range of up to

£7,000

matches your immediate requirements, contact us right away.

Success could be as far away as your telephone!

MORE THAN A COMPUTER COMPANY

measurex (IRELAND) LIMITED

A leading Cahoon-based manufacturer of digital computer-based measurement and control systems for the paper, pulp, energy management, rubber, plastics, and metal industries, has the following vacancies within its Engineering Department located in Cork —

SOFTWARE SERVICES SUPERVISOR

Salary Range: £7,000-£9,000 p.a. depending on experience and qualifications.

Duties: To be responsible for all functions within the software laboratory and simulation areas associated with the Engineering Department.

The successful candidate will hold a good Engineering or Science degree with a Digital Computing and Computer Programming basis, and have at least 5 years relevant experience. Knowledge of RSX-11M and/or HP DOS-M is essential.

SOFTWARE ENGINEERS

Salary Range: Up to £6,000 p.a.

Duties: To work on the development and manufacturing of computer-based digital measurement and control systems in the Paper, Plastic, Rubber or Metal industries. To be involved in the installation and start-up phases of these systems.

The successful candidate will hold a good Engineering or Science degree with course work in Digital Computing and Computer Programming. Experience in assembly level programming of Real-Time Computer systems is highly desirable. Travel throughout Europe will be required.

There is a contributory pension scheme and a home allowance. Relocation allowances will be payable if appropriate.

Reply requesting application forms to: Engineering Department, Measurex (Ireland) Ltd., Mallow Road, Cork, Ireland.

THE PERFORMING RIGHT SOCIETY LIMITED

requires a

PROGRAMMING CONSULTANT

Reporting to the Systems and Programming Manager. His/her duties will include:

- Assisting Systems and Programming project team personnel in the development and maintenance of new and existing systems.
- Maintaining all standard utility programs and associated documentation.
- Scheduling program testing on the computer and vetting, same on behalf of Systems & Programming personnel.
- Editing and maintaining the Programming Standards Manual, and any related literature.
- Appraisal of proprietary and other software for use on our ICL 2960/DME computer.

He/she should have extensive PLAN and disc experience and also possess a sound working knowledge of COBOL. Experience in communications application programming would be an advantage.

The salary will be within the range £4,500-£7,056 according to experience.

COBOL PROGRAMMERS

With 1-2 years' experience, to work in small and friendly teams of experienced programmer/analysts, using the Society's 2960/DME computer.

The salary will be within the range £3,497 to £6,488 depending on experience with excellent opportunity for further advancement.

The Society offers a number of fringe benefits including L.V.s., flexible mortgage assistance (after a qualifying period); 4 weeks' holiday and a staff restaurant.

SOFTWARE MANAGER SELF-SERVICE TERMINALS to £12,000

My client for this assignment, apart from being a noted manufacturer of mainframe hardware, is additionally a leading supplier of terminal devices for many purposes. Many of these terminals are produced for general marketing, whilst others are devised for individual client requirements. Increasingly, the emphasis is on customer operation.

To support this important and growing area of its business, the company has decided to establish a specialised software group, for which the staff and expenditure budgets increase steeply over the coming five years. The management has decided to make the appointment of Manager at this stage, in order that he/she may take immediate control of the existing embryonic group.

The requirements for this position are a sound technical background in terminal and/or communications software, coupled with demonstrable ability to lead a professional group of software technicians.

The software division is located in a beautiful part of the country and, if necessary, costs of relocation will be paid. Other benefits include a generous salary, superannuation scheme, life assurance, etc.

Applicants should telephone A. P. BAKER on 01-499 4501 or send him a comprehensive C.V. at the address below, quoting.

REF. RW 48/1

OPPORTUNITY + SECURITY

FOR DEC PROGRAMMERS WITH A BACKGROUND IN BOTH HIGH AND ASSEMBLER LEVEL LANGUAGES, PREFERABLY WITH RSX-11-M

So often you must make a choice between security of employment and opportunity. This client of mine can offer you a combination of both.

The company is young (18 months) and still relatively small (under 30 staff) software house specialising in advanced real-time systems on PDP/11 and Intel hardware — there's the opportunity.

It is a wholly-owned subsidiary of a major international company, long established in electronics, which is backing it to the hilt — there's the security.

The salaries are competitive and will reflect your experience and capability, and there is an attractive package of fringe benefits. The location is Berkshire.

In the first instance, please phone TONY BAKER on 01-499 4501.

REF RW 48/2

COMPUTER SERVICES

LONDON based, some European travel

salaries £12,000-£15,000 p.a.

One of the world's leading corporations requires two managers to guide the development and marketing of their European Computer Services function. As members of the new European HQ staff, they will need to liaise with, and motivate the organisations of individual countries into fulfilling European objectives. Consequently applicants should be people whose tactful diplomacy masks a determined approach to achieving results.

MANAGER INTERNATIONAL ACCOUNTS

Many customers are multi-national corporations operating throughout Europe. The Manager International Accounts will co-ordinate sales activity to these companies across country boundaries. Through liaison with the individual countries sales management, an international account development plan is to be produced for each customer.

Subsequently, the incumbent will diplomatically monitor progress against this plan, at all times assisting the individual countries to work towards achieving European objectives.

The post demands a track record in sales management and offers an opportunity to enter a major corporation at a senior level. Remuneration, by salary only, will be in the range £12,000-£14,000 p.a.

RW 48/3

MANAGER STRATEGIC PLANNING

The actual title is Manager Planning and Marketing Analysis and the job function covers both planning and marketing activities. These activities will be performed at a European level, i.e. plans will be produced in conjunction with the individual countries which dovetail to form the operating basis for Europe.

The primary requirement is strong strategic and operational planning experience in the computer industry. An additional quality is the personality to guide individual management teams into a common approach thereby creating a more effective and profitable European venture. Constant viability to top management allows you to forge your own career, whether in Europe or the U.S.A. Remuneration, by salary only, will be in the range £13,000-£15,000 p.a.

Development Engineers/ Systems Programmers

Your career
could really
take off here in
Kidsgrove,
N. Staffs

£3600-£7200

We're at the forefront of computer technology, we're successful and we're growing fast. This continuing expansion means that we now need more Engineers and Programmers to work on the design of the following developments:

- Input/Output Controllers
- Communication System Controllers
- Intelligent Communication Terminals
- The work involves:
- Logic design
- Network Systems Programming
- Intelligent Terminal Programming
- Microprocessor applications
- Programming of I/O Controllers

You may already be experienced or a recent graduate in electronics, computer science or other science discipline. We want to see you to tell you more.

Kidsgrove is situated in the pleasant rural setting of North Staffordshire. A wide variety of housing is available and we'll help you move.

Find out more, fix a date with the decision takers, ring Herrick Thwaite on Stoke-on-Trent (0782) 29681 ext 3531 or write to him at ICL, Westfields, West Avenue, Kidsgrove, Stoke-on-Trent ST7 1TL. Please quote reference CW1098.

These positions are open to both men and women.

SOFTWARE FACTORY MANAGER

FIRST RATE SALARY + BENEFITS PACKAGE

A Unique Opportunity in Kent with a major corporation

The unusual job title reflects a unique and interesting post, part operations, part analysis, part technical but wholly MANAGERIAL.

The company is taking a radically new approach to the development of customised machine software and needs a manager for its production operations. The production team comprises primarily OPERATIONS staff with systems people in support. The customer software is created by parameter driven manufacturer's software on a personalised order basis. The manager will have total responsibility for a data take-on operation and for the assembly of host computer held, pre-tested generic software modules to the ordered specification, utilising a 370/148 shortly to be replaced by a 3031 and a 158 under VSI. This includes quality control and the introduction of further improvements to the production process.

Currently, you may be an Operations Manager, a Project Manager, a Data Processing Manager or someone responsible for the computer back-up to a hardware production line, but to make a success of this role you need to be a strong personality dedicated to achieving management objectives in a pioneering (and therefore sometimes difficult) environment.

Write in confidence, sending a resume, to DAVID HUTCHINSON.

Are you looking for on-line experience?

The Royal Borough of Kensington and Chelsea has a requirement to develop a number of new on-line systems. In order to meet the growing demand for computer facilities, the Computer Department now requires:

PROJECT LEADER REF. 001

c £7,000 p.a.

To take responsibility for the management of a team, comprising a systems designer and a number of programmers, developing and maintaining computer systems. The Hardware/Software configuration is IBM 370-138, DOS-VS, CICS, SPMOL. The main programming language is COBOL and the installation standards are based upon structured design and programming. Program development is via terminal using SPMOL.

If you have a minimum of two years' programming and two years' system experience and wish to develop your skills in an on-line environment, we would very much like to hear from you.

SYSTEMS DESIGNER REF. 002

c £6,500 p.a.

To take responsibility for the technical design of application systems and the guidance of programmers, working within a project team environment. Applicants for this position should have gained a minimum of two years' COBOL programming and one year's systems design experience.

PROGRAMMER REF. 003

c £5,500 p.a.

To take responsibility for specifying, developing and maintaining programs in COBOL and possibly RPG II. Applicants for this position should have had at least two years' COBOL programming experience.

JUNIOR PROGRAMMER REF. 004

c £4,000 p.a.

To design, code and test small to medium-sized COBOL programs. Applicants for this position should have received basic training and gained nine months' COBOL programming experience. Benefits include 4-5 weeks' holiday, depending upon seniority, subsidised staff restaurant, season ticket loan and an active Sports and Social Club.

The Royal Borough of KENSINGTON AND CHELSEA

Application form quoting appropriate reference number(s) from the Establishment Officer, Dept. 161, The Town Hall, Hornton Street, London W8 7NX. Tel. 01-267 4662 (24-hour answering service). Application form to be returned by 18th December 1978.

The Council welcomes applications from suitably qualified Registered Disabled Persons.

THE SALES AND MARKETING BIT

The agonies of internal politics

EVERY company has to suffer the idiosyncrasies of internal politics. It is a sad commentary on human nature that this futile pursuit is an omnipresent reality in all aspects of business life.

Key personnel move to other companies to escape, or are unhappy in their job because of it; irrational and harmful decisions are made because of it; profitable opportunities are lost because of it; salesmen fail to secure orders because of it. Politics is an amorphous cancer arising from such nasty sources as arrogance, chauvinism, egotism, autocracy, corruption, megalomania and our feudal heritage.

Politics is sterile. This phenomenon often emanates from a conflict involving only two people, but it is not unknown for open warfare to be declared between entire company divisions and departments.

So how can the salesman pull business out of such a morass without getting his hands dirty?

The inevitable answer is: With extreme sensitivity and caution!

A classic situation is a clash between the purchasing department and a user department. The salesman may be making good progress in his negotiations with, say, the manager of the finance department for the supply of an interactive computing services in the context of financial planning, when suddenly, out of a clear blue sky, the manager of the purchasing department gets into the action: "No department has authority to order any supplies without a purchase order which in turn can only be generated with my formal approval."

As opposed to "I am the only manager with the technical resources and authority to assess and order external computing facilities." Or even a cry from the date processing manager: "We have a computer of our own which is able to satisfy most of the company's requirements."

At the other end of the scale, one usually discovers that the "shop-floor" intelligence network is reliable, and a consensus of opinion at that level will be a valuable input towards deciding where the majority of sales effort should be made.

The salesman must always be an political animal in the eyes of the client.

IN last week's Sales, Biz, o printer's gremlin generated a new phrase: "The automatic buyer". Even though such a beast might make selling a lot easier, it should, of course, have said "The automatic buyer".

At present, this connector family comprises three basic constituents: one to three row connectors with straight or offset pins and a total of 81 pins, contact springs with twin contacts for solder or crimp connection and one to three row contact spring casings with up to 81 pins. The contact spring is in position of insertion into the casing.

Pin connectors for horizontal mounting on printed circuit boards are under preparation and the connector will be available in all sizes by 11th Jan.

The crimping tool can also be supplied for rapid and neat connection of the contact springs to stripped wires. Siemens claimed.

Siemens AG (GW), Postfach 103, 8000 München 1, West Germany. Tel. (018 48) 224 8094.

It has a locking device which prevents the tool from opening before the crimp operation has been completed. The belted contact springs are run off a built-up reel.

While manual crimping tool is not suitable for laboratory work and small volume production, the crimping machine can be used for plus connector wiring in series production.

It can perform 900 to 1,200 crimps per hour; contact feed is automatic and it requires a 240 volt AC power supply.

Product Notes

Module connectors

CIRCUITS from most areas of electronics can be connected simply with the aid of new module connectors from Siemens suitable for sandwich and mother/daughter board configurations.

Ascii through the Logic Gate

An epic in 32K words, by Richard Forsyth

Block 22 (A Block of Ice)

Simula's late-night broadcast has aroused Hex to more unsystematic activity. Leaving his colleagues he sets out towards Fort Ranfour. En route he encounters Johnny McNull, an inveterate collector of electronic boulders with a peculiar form of brain damage.

AFTER sending her warning to Hex, Simula stowed away the booster aerial and slipped back into the hard bed. She slept soundly. Her conscience was clear: she felt she had done her bit.

She woke the next morning to find the redoubtable Eleanor Benzadrine leaning over her. She assumed this was the moment of truth: they had come to drag her off to the brain-scanner.

"Get packed and ready to go," ordered Benzadrine. "You'll be leaving in an hour. You're going home."

Simula was perplexed. She had steeled herself to face a renewed inquisition. This was an anti-climax. "Home?" she queried, "but you need my background information on Hex." She still did not suspect that she had already fulfilled her part in Extracode's intricate stratagem and was now redundant.

"We have all the information we need," Benzadrine curtly informed her. A glimmer of realisation dawned on her. If they had monitored her call to Hex, and his reply . . . Perhaps she had been a pawn in their game. A gnawing doubt clutched at her stomach; but anything more she said would be incriminating, for herself and Hex, so she kept quiet and meekly followed Benzadrine out.

Meanwhile in another part of the Fort a meeting of the two surviving members of COBRA (Committee On Bug Rectifying Action) was in session.

"The Hexadecimal Kid and his damned Nulls are making us look like fools," complained Ivor Giltch, pacing angrily across the room.

"I don't think so," replied Extracode, unruffled. Giltch fixed him with a venomous glare. "How can you say that? We've lost Kludge and six of our best operators. Only four survived the expedition. Their camp turned out to be an active volcano."

"That was pure bad luck. No, he's not making fools out of us," denied Extracode. "We're making fools of ourselves. We're using sledgehammers to crack a nut."

"I'll crack his nuts with a sledgehammer if I get near him!" stormed Giltch.

"We're taking him too seriously," soothed Extracode. "He's a small fry. He can only hurt us through our own mistakes."

"Well, what do you suggest then?" demanded Giltch. Extracode's patronising assumption of superiority displeased him. After all, he was the boss.

"If we give him some room to manoeuvre he'll start making his own blunders."

"I hope you're right. Anyway, next time we know where they're hanging out we'll have to be more careful how we handle them."

"I do know where they're hanging out, and I am being very careful about it."

"What?"

"They're back in Spricket's Hole, at least they were last night. I've a feeling they'll be moving on now."

"You let them get away?" expostulated Giltch, too incredulous to be angry.

"I encouraged it," revealed the ice-cool Extracode. "All right," said Giltch in resignation. "What's going on here?"

"I think you'll enjoy it more if I leave you a bit in the dark for the time being," answered Extracode suavely. "Let me just say that I've provided our friend Hex with the rope he needs to hang himself. I think this problem will be solved far sooner than you anticipate."

"You haven't forgotten the penalty for withholding data from the Database?"

"Most certainly not."

"But who's he?"

"He's the leader of the hard-bush Future System project."

Extracode looked impressed, but he didn't give up easily. "I would have thought," he suggested in his most eloquent voice, "that if we're to have a battle on the board Eleanor Benzadrine with all her experience would be a more suitable choice."

Giltch smiled for once. "You can forget that idea, old boy."

Before Extracode could counter, there was a knock at the door. Evidently one of the candidates had arrived early for interview.

"Come in," called Giltch amiably.

Hex and McNull strode in, each armed with one of Hex's terminators.

Giltch turned towards Extracode. "Is this you doing?"

"Not entirely," was the reply.

"What's Extracode up to?" Michail

asked Extracode.

Giltch flicked through the papers. "Gino F. Fionacci," Design Consultant. Doesn't have much to recommend him. It says something here about graphics expertise. We needn't waste much time on him. Rosanne Rose is a different kettle of fish altogether — the candidate approved by the System evaluation routine. She's the wife of Mike Rose, former lecturer in Telematics at Winograd University."

"But who's he?"

"He's the leader of the hard-bush Future System project."

Extracode looked impressed, but he didn't give up easily. "I would have thought," he suggested in his most eloquent voice, "that if we're to have a battle on the board Eleanor Benzadrine with all her experience would be a more suitable choice."

"You haven't forgotten the penalty for withholding data from the Database?"

"Most certainly not."

"Or for obstructing the advancement of the System?"

"A robot in my position can't afford to forget that."

"Then you'd better be sure your scheme doesn't misfire. If I have cause to question your reliability I shall hand you over without hesitation to Quality Control for refurbishing."

"I understand."

"The," snorted Giltch. "Now let's get on with the business in hand." He walked over to an RJE station where a printer had just finished spewing out forms on pre-printed stationery. These were the curriculum vitae of the applicants for Kludge's vacant job as Chief Dynamic Debugger. He bulked the printer over and dropped it with a thud on the table.

"Rather a long short list," remarked the unflappable Extracode.

Giltch looked at him, making a mental note to delve into Extracode's own murky past as soon as possible. There were said to be one or two skeletons in the cupboard of the distinguished inspector's career. Rumour had it that he had been involved in the great virtual machine cover-up fiasco.

"Here are the names," said Giltch, and began reading: "Eleanor Benzadrine, Gino Fionacci, James Hook, Andy MacRae, Rosanne Rose. I don't know why that incompetent bungler MacRae bothered to apply. As for Hook . . ."

"He shrugged."

"I know the others, but who are Fionacci and Rose?" asked Extracode.

Giltch flicked through the papers. "Gino F. Fionacci," Design Consultant. Doesn't have much to recommend him. It says something here about graphics expertise. We needn't waste much time on him. Rosanne Rose is a different kettle of fish altogether — the candidate approved by the System evaluation routine. She's the wife of Mike Rose, former lecturer in Telematics at Winograd University."

Zurich Insurance UK Head Office located at

PORTSMOUTH, HAMPSHIRE

International Insurance Group requires imaginative and enthusiastic DP personnel (male or female) for computer operations and for existing and planned project teams engaged in the development and maintenance of a wide range of insurance systems involving both on-line and batch applications. We presently operate a one megabyte IBM 370/148 under VM 370 and DDS VS using CICS, DBS and DL/I.

SYSTEMS ANALYSTS

£5000 - £8000
3 years analysis experience in a commercial environment, preferably with a background in programming and some experience of DBI DC applications.

PROGRAMMING STAFF

up to £5000
Cobol experience essential; some on-line experience would be an advantage.

SHIFT LEADER

£2750 + 20% Shift Allowance
3-shift, 5-day week basis. IBM 360/370 operating experience; preferably already leading a shift.

For all positions full training will be provided to meet both immediate job requirements and to aid future career development.

- Excellent fringe benefits include:
- * ASSISTED MORTGAGE SCHEME (no qualifying period)
 - * GENEROUS RELOCATION ASSISTANCE
 - * NON-CONTRIBUTORY PENSION SCHEME (including free Life Insurance)
 - * FLEXIBLE WORKING HOURS (with the exception of Shift Leaders)
 - * MODERN OFFICES WITH SUBSIDISED STAFF RESTAURANT

Write giving career details to:
C. P. Nash, Staff Manager,
Zurich Insurance Company,
Zurich House,
Sloane Road, Portsmouth PO1 1DU.

'79 WAS A VERY GOOD YEAR FOR ALTERGO

No, it's not a mistake and we don't have a time machine, but we do have a full order book.

SHARE OUR SUCCESS IN THIS COUNTRY AND AROUND THE WORLD

With consistent growth of Altergo over the past few years we know that 1979 is going to be a busy year with our Clients requesting help on a variety of projects. We need more people from a wide range with IBM experience.

CONSULTANTS ANALYSTS PROGRAMMERS
General Systems Divisions Mainframe Division
Building Systems on Design and Development of Systems on IBM 370 and Series 30 using PL/1, Cobol and I.M.S.
System 3/34/38
Using RPGII & RPGIII
and Cobol

ALTERGO OFFERS: ★ High Basic Salaries with Regular Reviews
★ Profit Sharing Scheme ★ All Expenses Paid ★ Variety of Projects
★ Opportunity for Overseas Travel

Please talk to us by telephoning Roger Perkins to arrange a meeting on 01-734 9681 office hours or evenings and weekends on 049-481 2713 or write to him at Altergo (Personnel) Ltd., Warwick House, 38 Soho Square, London W1V 5DP.
